A Weekend in the Life of the On-call Crew

Walker Witt - CEO
wwitt@bhec.coop

For many of us, the weekend brings a time to reconnect with family, do chores around the house, worship at church, and recharge for the upcoming week. For your on-call crew at Black Hills Electric Cooperative, their weekend consists of responding to outages so that the rest of us can enjoy the weekend.

There is no “average” weekend of call. Weather often plays a significant role in outages. Snow, ice, and wind contribute to most outages in the winter and early spring, and lightning is the single most prevalent cause of outages this time of year. The weekend of July 24th & 25th had no weather-related outages, but did have several outages that your cooperative typically experiences in the summer.

For your on-call crew at Black Hills Electric Cooperative, their weekend consists of responding to outages so that the rest of us can enjoy the weekend.

The first outage call came in at 6:19 a.m. on Saturday morning from a member near Oelrichs. The crew responded and found that a raccoon had climbed a pole and made contact with a transformer, which blew the fuse and caused the outage. At 7:39 a.m. that same morning, a member called from the Hermosa area to report the second outage of the weekend. The crew responded to that outage and found another fuse blown and a dead bird at the bottom of the pole.

Birds and small animals often come in contact with lines and equipment. Mitigative efforts such as putting galvanized tin at the base of poles discourage clawed animals from climbing the poles.

In areas that attract a number of birds, putting cover-up or conductor insulation above energized equipment seems to help. The triangles that you may see on some of the cooperative's poles are designed to keep large birds from perching on the cross arms between the phase wires.

Later that same morning, the crew received a call from the cooperative's dispatch center reporting that an electrician called in and wanted the crew to call them back. While digging near the power pole, a contractor inadvertently struck an existing underground secondary power line and ended up damaging the connection under the meter. The on-call lineman talked the electrician through what needed to be done on his end before the lineman could fix the cooperative's equipment. The remainder of Saturday was outage-free for your on-call crew.

The following two outage calls came in Sunday morning at 7:09 a.m. and 8:45 a.m. Both outages resulted in blown fuses. One cause was another small bird, and the cause of the second outage was undetermined.

The first of two calls that we never want to hear came in at 12:45 p.m. on Sunday afternoon. The Fall River County dispatch called and reported that a fire that started along the highway had burned under one of the cooperative's power lines and damaged our poles. The last call of the weekend came in at 7:37 p.m. The Rapid City's dispatch center called to report that a grassfire crossed under one of the co-op's power lines. Crews responded to both calls to inspect the cooperative's infrastructure. Neither incident damaged the cooperative's equipment or poles. Fortunately, the co-op's lines were not involved in either fire's origin, and both fires were contained quickly.

That was the weekend in the life of our on-call crew during the third weekend of July. I thank all our linemen for their efforts so that we all have reliable electric service.

Be safe, and I hope you all enjoy this last month of summer.

Member Appreciation Meal
Wednesday, September 1st, 2021
4:30 - 6:30 p.m.

Mark your calendar & plan to join us for a free meal at the Rimrock Community Center in Johnson Siding.

Labor Day - September 6th

Our office will be closed on
Monday, September 6th,
in observance of Labor Day.

Murphy

Be aware of overhead power lines on farms

Powerlines pose a major hazard for South Dakota farmers. Lines over roads and rural areas have a minimum clearance of 18 feet but just 12.5 feet over residential private property.

Before working in a field or around shops or grain bins, always take the time to note the location of your cooperative's power lines so that you can make sure to remain a safe distance from them and stay free from harm. To stay safe around overhead power lines, farm operators and workers must:

- Always use a spotter when operating large machinery near utility power lines.
- Use extra caution when raising augers or grain truck beds around co-op power lines.
- Keep equipment at least 10 feet from power lines - at all times, and in all directions.
- Inspect the height of farm equipment to determine the proper clearance.
- Always lower extensions to the lowest setting when moving loads.
- Never attempt to move a power line out of the way or raise it to get added clearance.
- Call your electric cooperative immediately if a power line is sagging or is

hanging too low.

- If contact is made with a power line, remember that it is almost always safest to stay on the equipment. Make sure to warn others to stay away and call the cooperative immediately.

- The only reason to decide to make an exit is if the equipment is on fire. If this is the case, then remember to jump off the equipment with both of your feet together, avoiding touching the ground and vehicle at the same time.

Then, still keeping your feet together, "bunny hop" away from the vehicle until you reach a safe distance.

If you see someone else's equipment that has come in contact with a power line in your area, the best help you can give will be from a safe distance.

Make sure to yell out, signal or call the equipment operator to make sure he or she remains in the vehicle, and notify your local cooperative immediately.

Please remember to follow these tips to avoid accidents during the harvest season.

TIPS FOR A SAFE HARVEST

The Upper Midwest Agricultural Safety and Health Center offers this useful checklist for farm safety called Stop-Think-Act. Take these steps to minimize injury risks during harvest season.

Stop

- What could go wrong?
- How bad could it be?
- Has anything changed?

Think

- Do I clearly understand the task?
- Am I physically and mentally ready?

- Do I have the right equipment and tools for the job?

Act

- Make it safe.
- Use the right tools.
- Follow proper procedures.
- Reduce risks.
- Stop the task if it cannot be done safely.

You put the 'pow' in power!

Madilyn Gaikowski

Madilyn sends out a special note of appreciation for line workers across the state of South Dakota. She is the daughter of Gene and Loree Gaikowski. Gene serves as the Wessington Springs line foreman at Central Electric in Mitchell.

Kids, send your drawing with an electrical safety tip to your local electric cooperative (address found on Page 3). If your poster is published, you'll receive a prize. All entries must include your name, age, mailing address and the names of your parents. Colored drawings are encouraged.

CROCKPOT CRAVINGS

CROCKPOT APPLE BUTTER

Ingredients:

- 4 cups of sugar (more or less depending on sweetness of apples)
- 4 tsp. cinnamon
- ¼ tsp. cloves
- ¼ tsp. salt

METHOD

Fill a 5 quart crockpot full of chopped apples (quartered or smaller), no need to peel, but do remove seeds. Tart apples are best. Top with the ingredients above. Lid won't fit at first but settles down as apples cook. Begin cooking on high and when bubbling, put heat on low and cook all night, or until thick and dark color. Stir occasionally. If need be, blend a few seconds to soften peels. Pour into jars and seal.

Cherie Leibel, Timber Lake

SLOW COOKER BEEF STEW

Ingredients:

- 3 cups water
- 1 package McCormick® Classic Beef Stew Seasoning Mix Packet
- 2 lbs beef stew meat, cut into 1-inch pieces
- 1/4 cup flour
- 2 cups potato chunks
- 1 1/4 cups carrot chunks
- 1 medium onion, cut into thin wedges
- 1/2 cup sliced celery

METHOD

Mix vegetables, water and Beef Stew Seasoning Mix in slow cooker. Coat beef with flour. Stir into ingredients in slow cooker. Cover. Cook 8 hours on low or 5 hours on high until beef is tender.

mccormick.com

CROCKPOT BUTTERNUT SQUASH WITH APPLES

Ingredients:

- 1 ½ to 2 lbs. butternut squash, peeled and chopped (about 5 cups)
- 2 to 3 tart apples, chopped (about 2 cups)
- ¼ c. dried cherries or cranberries
- 1 ½ tsp. grated fresh ginger
- ½ tsp. salt
- 1/8 tsp. pepper
- ½ tsp. cinnamon
- ¼ tsp. nutmeg
- ½ c. apple cider
- ¼ tsp. salt

METHOD

Combine all ingredients in your slow cooker and stir together. Cover and cook on low 3-4 hours or until squash is tender, then turn to warm until serving. Can also be baked in conventional oven at 325 degrees until fork tender. Sweet potatoes can be used instead of butternut squash if desired.

Linda Sherry, Sioux Falls

Please send your favorite dairy recipes to your local electric cooperative (address found on Page 3). Each recipe printed will be entered into a drawing for a prize in December 2021. All entries must include your name, mailing address, phone number and cooperative name.

Dear Pat: I was an electric vehicle skeptic, but I just saw an announcement of the all-electric Ford F150 Lightning. I didn't realize electric pickups could be this compelling or competitive. Are there other electric pickups or SUVs coming out soon? - Mike

Pat Keegan
Collaborative
Efficiency

Brad Thiessen
Collaborative
Efficiency

Electric SUVs are available now and pickups will be soon. This development has been anticipated for years. Electric vehicle (EV) sales are about 24 times higher than they were 10 years ago, with several factors driving demand:

- The instant torque from electric motors boosts acceleration.
- The low center of gravity improves handling and reduces rollover risk.
- The superior traction control of electric motors can increase off-road capability and safety in winter.
- The upfront cost of an EV purchase is now more competitive with similar internal combustion models, and most EVs qualify for a federal tax credit of up to \$7,500.
- The cheaper operating fuel cost per mile (for electricity) compared to gasoline or diesel is another attractive feature for drivers.

Ford's electric F150 Lightning is scheduled to arrive in spring 2022, starting under \$40,000 for the commercial trim package (230-mile range model). A 300+ mile battery is an option, and all models are 4X4 with respectable towing and payload capacities. The Lightning is also equipped to provide 9.6kW of home backup power or portable power for a jobsite.

Tesla has more than a million preorders for their new Cybertruck, which will likely arrive in 2022. The 250-mile range 2WD model starts under \$40,000 and steps up to \$50,000 for the 300-mile range 4WD model. Tesla plans to offer a 500+ mile range version

for \$70,000 that can tow more than 14,000 pounds.

GMC has announced a late 2021 release of an electric Hummer with 1,000 horsepower and additional features for off-road performance.

Rivian, a startup backed by billions of dollars from Ford and Amazon, is planning to unveil their R1T electric pickup later this year.

Crossover SUVs (CUVs) are one of the most popular types of vehicles, and a number of manufacturers say they'll have electric models available soon. Ford's Mustang Mach-E is actually available now with a range up to 305 miles, starting at \$45,000. Volkswagen's ID4 CUV starts at \$40,000 and is available with AWD options. More electric SUVs are coming, including Rivian's R1S, Nissan's Ariya and Volkswagen's six-passenger ID6.

Tesla has more than a million preorders for their new Cybertruck, which will likely arrive in 2022.

And it's not just vehicles that are shifting to electric. Electric snow machines and jet skis are arriving soon. Even large construction equipment like excavators, backhoes and heavy-duty trucks will have electrically fueled models.

One remaining hurdle for increased EV adoption in rural areas is fast, sufficient charging for longer trips. Most EV owners charge at home, but more fast-charge stations on rural highways will be helpful.

If you're interested in an EV, talk to your electric co-op. They may offer special EV rates or rebates.

REZA BURNS

Brookings native and rising magician puts SD on the entertainment map

Billy Gibson

billy.gibson@sdrea.coop

While most of his peers at Brookings High School were playing sports, hunting and entering rodeo events, Reza Borchardt was venturing off in a completely different direction.

He was pursuing his childhood dream of becoming a magician and master illusionist in the style of his idol David Copperfield. From the time Reza (pronounced ray-zuh) got his first magic kit, he was determined to make a life and a living in the world of entertainment.

Today, Reza is on the tail end of a 140-day stretch captivating audiences at Branson's Famous Theater and making a big name for himself across the globe. In addition to touring extensively to more than 30 countries, Reza has made appearances on A&E's popular Duck Dynasty show and the CW network's Penn & Teller: Fool Us.

It all began for Reza in elementary school when he was asked to go on stage during a magic act. When he saw the response the magician was getting from the audience, that's when he caught the bug. By the age of 14, Reza was performing magic acts of his own and was inspired after meeting Copperfield in person on several occasions during his youth. By the time he was in college at SDSU, Reza was already touring across the region performing at corporate events and concert halls.

"When I got asked to go on stage and the guy was doing a simple trick with rings, it seemed like a really big deal. The kids were into it," Reza remembered. "That laid the groundwork for me. My parents bought me a magic kit and took me to see professional shows in Branson. I started building props and putting together an act in a warehouse in Brookings and started traveling and having some success."

When he was able to sell 200,000 tickets over 40 shows at a theater in Acapulco, that's when he had a hunch he could make it as a pro.

But Reza is savvy enough to know that the key to sustaining success in the business is reinventing his act and conceiving new ways to keep and hold the attention of audience members. That's how Copperfield was able to reach legendary status, he said.

"You have to find a way to keep making your brand relevant and keep your show exciting. People have so much sensory overload and the ways we receive information is moving so fast. So, I'm constantly updating the show and elevating the art form," he said. "I still film every show and watch it and critique it and look for ways to improve."

On stage, Reza carves out time to mention his South Dakota background and share stories of growing up in Brookings on the "cornfield side of the state." In some ways, he sees himself as an ambassador for South Dakota.

"I want to always remember my humble beginnings and how excited I was to be that kid who had dreams and plans," he said. "It's a vision that I saw happening, and now it has come true. And to think it all started in South Dakota...that's insane."

Rhonda Otten, along with her husband and three sons, has worked to keep Spink Family Restaurant open for business.
 Photos by Billy Gibson

Spink restaurant emerges strong from hardships brought by fire and pandemic

Billy Gibson
 billy.gibson@sdrea.coop

Old Spink. New Spink.
 That’s how Rhonda Otten variously refers to her restaurant, depending on whether she’s alluding to the Spink Café that burned down in 2019 or the Spink Family restaurant that was throttled by the pandemic but is thriving today.

For more than 20 years, the Spink Café was a big draw in the township located in Union County. The eatery was known for its Friday night fish fries during Lent, Sunday dinners and its famous Spinkburger. The 80-year-old structure had recently been re-decorated with a 50s theme, featuring old LPs, vinyl album covers on the wall and pictures of Elvis Presley.

But life for Otten and her husband Sam changed in November of 2019 when the area’s most

popular attraction was totally consumed by fire.

The way the Ottens saw it, there was no option but to rebuild. But the planned resurrection of the business wouldn’t occur in the confines of Spink. The new iteration, renamed Spink Family Restaurant, would be located in the old American Legion hall in downtown Elk Point.

By all accounts, the “new Spink” wasn’t so easy to bring forth from the ashes. Two weeks after working hard to get the new facility ready for business in Elk Point, the pandemic hit and threatened to dash the Ottens’ hopes for good.

“The fire was in November, we made the decision to keep going in December, and we re-opened in March. We were open for two weeks when the pandemic hit, Rhonda said. “Those two weeks were very, very busy. It was a madhouse in

here. We had a lot more space and we were finally getting in the groove.”

Facing the same problems as just about every restaurant owner in the state and nation, the Ottens were forced to hit the pause button and try to figure out the next step to take. They closed for a month, regrouped, and then returned to offer carry-out service only.

Members of the community rallied to support the restaurant, including employees at Union County Electric located just two blocks away.

According to Union County Electric General Manager Matt Klein, the cooperative always strives to support other local businesses that help the community thrive.

“At lunchtime you’re likely to see some of our guys eating there,” Klein said. “When they had carry-out, we ordered food for meetings and just did what we could to help – just like we do with other members of the community. We help whenever and wherever we can.”

Server Karisma Tripp tends to another satisfied customer at Spink Family Restaurant in Elk Point.

Rhonda said it was inspiring to see the town pull together to face the impact of the pandemic, and also to help the business survive after the back-to-back calamities.

Cody Olson, center, enjoys lunch with his co-workers from Valley Ag Supply.

“The community really supported us and we’re very grateful for that,” she said. “But we’ve seen this many times before; people watching out for each other and helping when there’s a need. That’s what really pushed us through.”

One regular patron who is happy to see the new Spink succeeding is Joyce Schermer. She occupied a table in the restaurant one recent lunch hour along with her son Brad Johannsen and his wife Lori. The Johannsens are regular visitors to the

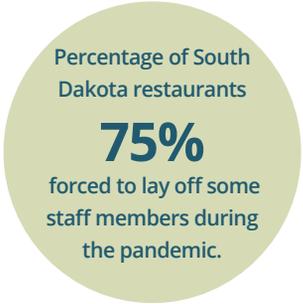

area from Sedona, Ariz., and always make a point to stop at Spink, preferring the hot beef sandwich and the prime rib sandwich.

“It’s always good every time you come,” said Schermer, a resident of Akron who opted for her go-to French Dip. “You’re never disappointed in the food or the service. It’s wonderful.”

Also enjoying a lunchtime meal were several employees of Valley Ag Supply. The company is located a half mile from the old Spink building that was destroyed by fire.

“We used to go there all the time and we were disappointed when it burned down. You could see our fertilizer plant from there,” said Cody Olson while noshing on the French Dip. “Now there’s no place to go. So, we just drive into town because it’s so good. It’s great that they came back and are still operating.”

As for “old Spink,” the Ottens are still trying to figure out what to do with the heap left in the wake of the conflagration. The building had an upstairs apartment where several members of the family lived at

various times through the years.

“It’s going to have to be torn down eventually, but we just don’t want to let it go,” Rhonda said. “There are so many memories attached to that place; both of our parents were such a big part of it.”

She emphasized that while the restaurant is in a new location, the food is the same as before. The Ottens, who have always used family recipes, depend on all three of their sons – ages 17 through 23 – to handle the cooking to maintain consistency on a daily basis.

“The secret to our success is that the five of us do all the cooking here. We use time-proven family recipes that have been popular for decades,” Rhonda said.

Simple & Consistent

BILLING CHANGES

DUE DATE:

OLD CYCLE #1 = 30TH

OLD CYCLE #2 = 10TH

NEW = 5TH

AUTOPAY:

OLD CYCLE #1 = 25TH

OLD CYCLE #2 = 5TH

NEW = 5TH

PENALTY:

OLD CYCLE #1 = 3RD

OLD CYCLE #2 = 13TH

NEW = 10TH

Your September billing statement may arrive at a different time than usual. We decided to combine our billing cycles to ensure consistency and simplicity. We currently have two primary billing cycles - our southern territory is on cycle #1, and our northern region is on cycle #2. We also have our true-up billing around the 2nd of each month for members that participate in our prepaid billing program.

The initial reason we had two cycles was to help spread the workload. Due to advancements in technology and improved efficiencies, we will be able to process everyone's bill at the same time each month.

All of our members are billed from the 1st to the 1st of each month. That part of the billing will *not* change. Our cycle #1 members currently get their billing statement around the 10th of each month, and our cycle #2 members get theirs around the 20th. Beginning in September, everyone will receive their bills around the 15th of the month, and they will be due by the 5th of the following month.

The penalty will be assessed on unpaid balances on the 10th of each month. Members that participate in our autopay program will have their amount withdrawn on the 5th of each month.

You may find the information to the left helpful in deciphering how these changes will affect your account.

If you have any questions, please don't hesitate to contact Michelle Fischer at 800-742-0085 or 605-673-4461.

Energy Efficiency Tip of the Month

Energy used for cooling and heating your home makes up the largest portion of your monthly energy bills.

By combining regular equipment maintenance and upgrades with recommended insulation, air sealing and thermostat settings, you can save about 30% on your energy bills while helping our environment.

Source: energy.gov

HARVEST SAFETY TIPS FOR FARMWORKERS

- **Maintain a 10-foot clearance** around all utility equipment in all directions.
- **Use a spotter and deployed flags** to maintain safe distances from power lines and other equipment when doing field work.
- **If your equipment makes contact with an energized or downed power line, contact us immediately** by phone and remain inside the vehicle until the power line is de-energized. In case of smoke or fire, exit the cab by making a solid jump out of the cab, without touching it at the same time, and hop away to safety.
- **Consider equipment and cargo extensions of your vehicle.** Lumber, hay, tree limbs, irrigation pipe and even bulk materials can conduct electricity, so keep them out of contact with electrical equipment.

AMERICA'S ELECTRIC
COOPERATIVES

LEARNING FROM ADVERSITY

The Dakota Lakes Research Farm produces information helpful to farmers and ranchers dealing with drought. *Photos by Billy Gibson*

SDSU agriculture researcher Dwayne Beck looks for better ways to gain higher yields through crop rotations and other techniques

Billy Gibson

billy.gibson@sdrea.coop

The drought conditions that gripped the state through the summer months caused difficulty for farmers and ranchers. The drought in 2012 also made it difficult to grow and harvest a productive crop.

But it's the drought that occurred in 1988 that Dwayne Beck remembers most. Beck, 70, is a researcher with SDSU who runs the Dakota Lakes research farm near Canning.

According to the National Integrated Drought Information System, as of June 23 more than 97 percent of South Dakota and all of Minnesota were categorized as "abnormally dry."

As someone who considers himself a seasoned investigator and problem solver, Beck looks at the current drought conditions as an

opportunity to learn.

So, what exactly did the farming and ranching community learn in 1988 when adverse weather conditions caused an estimated \$60 billion in agricultural damage across the U.S.?

"We learned not to do tillage," Beck responds without hesitation. "This drought is about the worse I've seen since 1988, and we learned then that in this part of the country if you till, you're screwed. No-till gives you a chance to have a decent crop and run a viable farming operation."

And the key to succeeding without tilling is proper crop rotation. That's what keeps Beck and other researchers busy.

On a recent afternoon, Melanie Caffe and her assistant Nick Paul were operating a small combine to gather their test crops laid out in strips measuring five feet wide by 20

feet long. Caffe, a native of France, is an ag professor at SDSU, while Paul is a local farmer and research technician.

The two-member team moved from section to section, cleaning out the collection bin as they went to keep the samples from being contaminated and corrupting the research data. The samples were

Dwayne Beck runs the Dakota Farms research facility near Canning.

Melanie Caffe and Nick Paul collect samples from a field at the Dakota Farms Research Station near Canning.

bagged and taken into the lab where Caffe and Paul planned to perform fertility experiments with the goal of developing varieties with higher yield, higher quality and stronger drought resistance.

Much of the research centers around maximizing yields through effective crop rotations. Beck has spent much of his career considering the ways farming was conducted 100 or more years ago and how it can be improved.

“The Natives grew crops before the Spaniards came and brought horses. They were all no-tillers because they didn’t have cows and horses to pull the plows. They grew 13 different kinds of corn, beans, squash and sunflowers. They were very successful. The settlers never asked anyone how to grow crops here, they just got out their plow and started turning over the soil.”

Beck has seen the wonders of crop rotation in his research. Some of his fields are rotated five ways.

“Good rotations can produce a lack of disturbance in places where you don’t have a lot of water. Our research shows 99 percent of resistance issues could be solved with better crop rotations. There are fields where we haven’t used insecticides for 18 years.”

Beck said his methods aren’t always adopted by industry but he continues to gather data and push out the information obtained through research.

“The nice about being a research guy is you always have more things to learn,” he said. “The more you research, the more you don’t know, but we’re always looking for answers.”

HOPS GROWERS NAVIGATING THEIR WAY THROUGH CHANGING INDUSTRY

Billy Gibson

billy.gibson@sdrea.coop

In many ways, Ryan Heine is like the average South Dakota farmer. He frets about the weather, plans for the future, worries about finances, watches the markets and is constantly trying to find a buyer for the crop he hopes will make.

But his crop is unlike most of the others that emerge from the South Dakota soil. Heine is owner of 6th Meridian Hop Farm near Yankton. His is one of six such farms left in the state growing hops for brewers to transform into craft beer.

Heine also sees his work as different compared to most farmers – he relies on his nose a lot.

“There’s a lot of experimenting with different aromas.

There are so many flavor profiles and varieties of hops that are used in creating craft beer,” he said. “There’s a vast palette of different aromas, and the market will dictate what consumers prefer.”

Ryan and his wife Michelle launched their hop operation in 2014, leaving Omaha and returning to the small family farm near Yankton in pursuit of a more grounded lifestyle for their five children.

“We wanted to get out of the city and back to our farming roots,” said Ryan, who works remotely as an electrical engineer for a company out of Minneapolis.

Ryan’s interest in growing the essential elements of craft beer began when he was a student at Parks College in St. Louis, Mo. He went out with his friends and found most of what was offered at bars, pubs and restaurants was bland and uninspiring. He knew he liked the flavor of beer and he knew he liked the simplicity of the farming lifestyle.

“So I started doing some home brewing and found that it was a fun hobby to pursue. Now we have one of the biggest operations in the state,” he said.

Heine’s time on the farm is spent fussing over flavor and aroma profiles, acid levels, yeast growth, oil content, insect invasions, disease infections and more. He and Michelle do all the growing, harvesting, processing, drying, pulverizing, preserving, pressing and packaging.

He finds markets by visiting with brewers, forging relationships across the region and even keeping in touch with his college buddies.

“There are some college roommates I’ve kept in touch with who are brewers and we’re always talking about how to improve our products,” he said. “Hops growers are down to just a handful in the state, but for those who have survived, I think the outlook is good.”

BULLISH ON BEES

Beekeeping industry struggles with drought and other obstacles along with overall agriculture sector

Billy Gibson

billy.gibson@sdrea.coop

Becoming a beekeeper wasn't something Chad Holbrook dreamed about back when he worked as a farm loan officer in Texas.

But he decided it might be an interesting hobby, so about 10 years ago he bought himself a hive just for the fun of it.

As things sometimes tend to go, one hive led to two, two hives led to four and before he knew it, Holbrook was giving his day job the boot. Goodbye business suit, hello beekeeping suit.

These days, Holbrook manages about 3,000 hives out of his main headquarters in Fairfax, MN, although he still has some hives back in Texas. A member of Renville-

Sibley Co-op Power, he ships his hives for pollination purposes all across the Midwest and to other regions as well to help growers gain higher crop yields.

"After I got my first bee hive I just really enjoyed doing it, and it snowballed and just kept increasing every year," Holbrook said. "I finally quit my day job to run the business in January of 2017, which is something I never thought I'd do."

That's a move that took some courage because Holbrook knew from his brief experience that while bees can be tough buggers, they also have plenty of obstacles threatening their place in nature and their very existence.

After all, some of the boxes, frames, pallets and extraction equipment he purchased to start

his own operation were acquired from beekeepers making a bee-line straight out of the business.

The list of real and potential apiary antagonists is long. Apiculturists are constantly trying to protect their colonies from various types of threats including several species of mites, insecticides, pesticides, extreme weather and destruction of their habitat.

One pitfall not often discussed in the public discourse is the attrition that takes place from merely moving colonies from one patch of farmland to the next, and in some cases, moving hives from one spot to another to protect them during the inclement non-pollinating months.

Holbrook figures the attrition rate can be up to 10 percent anytime hives are loaded onto a truck and hauled to different locations. It's a significant loss considering an estimated one-third of the world's food supply depends on the pollination work performed by

Honey bees pollinate roughly one-third of the world's agriculture crops.

honey bees. Since 2010, beekeepers in South Dakota, Minnesota and across the country have experienced historically high colony loss rates of nearly 30 percent a year impacting roughly 90 different agricultural crops ranging from almonds and apples on the West Coast to cotton and cranberries in the East.

“Keeping them alive is the hardest thing,” Holbrook said. “There are substances farmers use to manage vegetation and help their crops, but it’s causing a reduction in the forage area for bees. But everybody has to make a living and I don’t fault the farmers...if I were them I’d probably be doing the same thing. But we can all look for ways to be more environmentally friendly because we’re all making a living off nature.”

Holbrook, who describes himself as a migratory commercial beekeeper, typically transports bees to California every January to pollinate that state’s almond crop and then heads to his facility in Texas to extract honey. July is the slowest month of the year, then there’s a short fall season before the bees head to an indoor storage facility in Idaho for protection against the cold.

Despite the drought conditions that have caused stress for farmers, ranchers and apiculturists across the region, Holbrook is bullish on the beekeeping industry. He noted that the city of Sioux Falls recently approved an ordinance that allows residents to maintain hives on their property. Would-be beekeepers must

apply for a permit, take an online class, inform their neighbors of their intentions and adhere to other prescribed guidelines.

Holbrook reports that through the spring and summer seasons - and despite the drought - honey prices have seen an upward shift. For instance, he said the price for honey in the region last year was about \$1.70 per pound but has climbed to more than \$2.25. The international market is expected to expand from \$9.2 billion to \$19 billion by 2028.

“We were fortunate that we’ve had some timely rains and the hot, dry weather hasn’t caused problems for my business. It has been an average crop for me. But you don’t ever really know for sure until the honey is extracted,” he said.

According to owner Kiah Crowley, Sunrise Hives in Spearfish maintains about 400 bee colonies. *Photo by Sunrise Hives*

South Dakota State Fair
September 2-6, 2021

To have your event listed on this page, send complete information, including date, event, place and contact to your local electric cooperative. Include your name, address and daytime telephone number. Information must be submitted at least eight weeks prior to your event. Please call ahead to confirm date, time and location of event.

AUGUST 25-29
Corn Palace Festival
604 N Main Street, Mitchell, SD, 605-995-8430

AUGUST 26-29
58th Annual Steam Threshing Jamboree
Prairie Village, Madison, SD, 605-256-3644

AUGUST 27-28
Sizzlin' Summer Nights
Main Street, Aberdeen, SD, 605-226-3441

AUGUST 27-29
Fall River Hot Air Balloon Festival
Hot Springs Municipal Airport, Hot Springs, SD, 605-745-4140

AUGUST 28
McCrossan Boys Ranch Xtreme Event Rodeo
McCrossan Boys Ranch Campus, Sioux Falls, SD, 605-339-1203

SEPTEMBER 2-6
South Dakota State Fair
State Fairgrounds, Huron, SD, 605-353-7340

SEPTEMBER 9-12
SD State Senior Games
Watertown, SD, Contact Howard at 605-491-0635 for more information

SEPTEMBER 10
Mickelson Star Trail
Rochford Trailhead, Hill City, SD, register at <https://www.eventbrite.com/e/mickelson-star-trail-night-tickets-140121383831>

SEPTEMBER 10-11
Ribs, Rods & Rock n' Roll
Main Street, Vermillion, SD, 605-624-2021

SEPTEMBER 11-12
Fall Harvest Festival
Delmont, SD, 605-928-3792

SEPTEMBER 11-12
Hill City Quilt Show
Hill City High School Gym, Hill City, SD, 605-574-2810

SEPTEMBER 17-18
Deadwood Jam
Main Street, Deadwood, SD, 605-578-1876

SEPTEMBER 18
Health Connect Fair
Sanford Pentagon, Sioux Falls, SD, 888-761-5437

SEPTEMBER 18-19
Northeast South Dakota Celtic Faire and Games
37925 Youth Camp Road, Aberdeen, SD, 605-380-5828

SEPTEMBER 23-25
Black Hills Plein Air Paint Out
Various Locations in Hill City & Central Hills, SD, 605-574-2810

SEPTEMBER 23-25
Custer State Park Buffalo Roundup & Arts Festival
13329 US Highway 16A, Custer, SD, 605-255-4515

SEPTEMBER 25
Great Downtown Pumpkin Festival
526 Main Street, Rapid City, SD, 605-716-7979

SEPTEMBER 25-26
Menno Pioneer Power Show
Menno, SD, contact Daniel at mennopowershow@yahoo.com for more details

OCTOBER 1-3
SiouxperCon
1201 N West Avenue, Sioux Falls, SD, visit siouxpercon.com for more details and tickets

OCTOBER 8-10
2021 Black Hills Powwow
Rushmore Plaza Civic Center, Rapid City, SD, 605-341-0925

OCTOBER 9
Fall Festival
United Methodist Church, Fairburn, SD, 605-255-4329
