Flexibility is key

# Special meeting set for Sept. 24

**Walker Witt**

CEO and General Manager  
wwitt@bhec.coop

For years I coached basketball, cross country, and track. For each of those sports a portion of the practice was spent on dynamic exercise drills and stretches to increase flexibility. Increased flexibility allows an athlete to run faster, jump higher, react quicker, and stay healthy. Flexibility helps an athlete adapt to changing conditions and avoid injury. Flexibility is a key component for success in sports.

Flexibility is also a key for the success of your co-op and is more important now than ever. Your board, the employees, and all of you, our members, have been especially flexible these past five months. The April board meeting was a telephonic meeting, and due to space concerns, the past four months' board meetings have been held at the Custer County Courthouse Annex building. Some employees are working from home, and other employees have moved their workstations from closely spaced cubicles to conference rooms and the board room. Our operations crews are still working split shifts. Members are increasingly accessing SmartHub® to check on their accounts and pay their bills. The flexibility of all of us has enabled your co-op to adapt and continue to provide safe and reliable electric service.

A Special Meeting of the Members is scheduled for Thursday, September 24, and will be at Roy's Black Hills Twin Drive-In Theater in Hermosa. The primary purpose of the meeting is to elect a new director. Al Perry is retiring from the board and Mike Buckingham and Thad Wasson are vying for Al's board seat. Videos of Mike and Thad introducing themselves and explaining why they want to serve you are on our website and Facebook page. Biographies of each candidate are included in the Special Report and Official Notice of Meeting, which you should be receiving in the mail shortly. I want to thank both Mike and Thad for their flexibility and cooperation.

While the primary purpose of the meeting is to elect a director, what would a co-op meeting be without food, door prizes, and an early registration drawing? Box suppers will be provided when you drive in and pick up your packet. This year we will have drawings for \$300, \$100, and \$100 for those of you who pre-register. Due to the change of venue and meal plans, it is more important than ever that you pre-register.

Flexibility has enabled your co-op to be nimble, adapt quickly to the ever-changing world that we are living in, and to remain strong and healthy to serve you. I hope you have all had a great summer and look forward to seeing you in September.

Stay Safe!

Walker

## Follow your co-op on Instagram

To effectively engage with more members, Black Hills Electric Cooperative is now active on Instagram. Businesses on Instagram have more than 200 million viewers a day. We feel it is necessary to reach as many members as possible to help keep members informed.

Follow us @blackhillselectric for company updates, energy saving tips, planned outages, and much more! This application will help you stay connected and remain up-to-date with the latest cooperative news. For questions or concerns, please contact the office Monday through Friday from 7:30 a.m. to 5:00 p.m.

*BLACK HILLS ELECTRIC COOPERATIVE CONNECTIONS* is the monthly publication for the members of Black Hills Electric Cooperative, 25191 Cooperative Way, P.O. Box 792, Custer, S.D. 57730-0792. Families subscribe to *Cooperative Connections* as part of their electric cooperative membership. *Black Hills Electric Cooperative Connections'* purpose is to provide reliable, helpful information to electric cooperative members on matters pertaining to their cooperative and living better with electricity. Also available at [www.bhec.coop](http://www.bhec.coop).

This cooperative is an equal opportunity provider, employer and lender. If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, found on-line at [http://www.ascr.usda.gov/complaint\\_filing\\_cust.html](http://www.ascr.usda.gov/complaint_filing_cust.html), or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter by mail to U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Ave, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or e-mail at [program.intake@usda.gov](mailto:program.intake@usda.gov).

Subscription information: Black Hills Electric Cooperative members devote 50 cents from their monthly electric payments for a subscription. Non-member subscriptions are available for \$12 annually. Periodicals Postage Paid at Black Hills Electric Cooperative, 25191 Cooperative Way, Custer, S.D. 57730-0792, and at additional mailing offices.

Postmaster: Please send address changes to Black Hills Electric Cooperative, P.O. Box 792, Custer, S.D. 57730-0792. Address all other correspondence to: Cooperative Connections, P.O. Box 792, Custer, S.D. 57730-0792; Telephone: (605) 673-4461; Fax: (605) 673-3147; e-mail: [bhec@bhec.coop](mailto:bhec@bhec.coop); website: [www.bhec.coop](http://www.bhec.coop)

## Location of September 24 meeting changed

At its July meeting, Black Hills Electric Cooperative's board of directors discussed several options for the upcoming special meeting of members.

For the health and safety of those members who will attend the meeting, the board decided to change the location of the September 24 special meeting.

The new location will be at Roy's Black Hills Twin Drive-In Theater near Hermosa.

"We had big plans to celebrate Black Hills Electric Cooperative's 75th anniversary in Rapid City," said

Mike Chase, manager of marketing and member services. "However, with the pandemic, we can't risk the health of our members and employees. A drive-in meeting seems like the best way to get together."

Members will enter the drive-in theater on Tenaya Street from Highway 79 just north of the Corner Pantry parking lot.

A pulled pork box dinner will be provided at registration. BHEC employees will

assist in parking. Members will remain in or near their cars. The meeting will be on the west screen. Audio will be over the car's radio.

Members in attendance will elect a new director to replace Al Perry, who is retiring after serving 14 years on the board.

A special report will be mailed to all members on September 1. Included in the report is the pre-registration information. If you plan to attend, please call the office at 673-4461 or 1-800-742-0085 before Tuesday, September 15.

Pre-registration helps your co-op order enough meals for everyone and to better plan for the meeting. Members registering by September 15 are eligible for one \$300 cash prize or one of two \$100 cash prizes.

Registration will begin at 5 p.m. on Thursday, September 24, "We hope to start the business meeting at 6 p.m.," said Chase. "This is a new experience for all of us and we may have to be a little flexible with our schedule."

**BHEC's 75th  
Anniversary  
Celebration  
moved to Roy's  
Black Hills Twin  
Drive-In Theater  
near Hermosa**

**The 1952 annual meeting in Hot Springs looked like a drive-in meeting but it was local car dealers showing the new models. This year's meeting will really be at a drive-in.**

## Recreational Boating: Stay Safe on the Water

With more than 11 million recreational vessels registered in the U.S., millions of Americans are enjoying time on and in the water.

Each year, roughly 4,000 boating incidents occur, causing more than 2,500 injuries and about \$46 million in property damage. Stay safe by being prepared and using the appropriate equipment, whether enjoying a ride on a motorized boat, paddling a kayak or wakeboarding.

Life jackets are at the core of safe boating, whether using a motorized or non-motorized vessel. The U.S. Coast Guard reports 76 percent of boating deaths in 2017 were due to drowning, and 84 percent of the victims were not wearing a life jacket.

While regulations on life jacket use vary from state to state, the Wear It program of the National Safe Boating Council promotes boating safety by encouraging boaters to wear life jackets any time they are on a boat, motorized or non-motorized.

Good swimmers still need life jackets. When people fall off a boat, they may become disoriented, injured or unconscious. Life jackets can keep victims' heads above water so they can breathe and be rescued more easily. Every child should wear a life jacket at all times when boating.

Choose the right life jacket for the activities you will be doing. Double check to make sure the life jackets are U.S. Coast Guard approved and fit correctly:

- Make sure the jacket is a proper fit for your size and weight
- Make sure the jacket is properly fastened
- Hold your arms straight up over your head, ask a friend to grasp the tops of the arm openings and gently pull up; make sure there is no excess room above the openings and that the jacket does not ride up over your chin or face.

The National Safe Boating Council encourages following these boating safety tips to help minimize risks:

- Take a National Association of Boating Law Administrators safety course
- Be familiar with the boating state laws
- Know the "Rules of the Road"
- When operating a motorized boat, know about carbon monoxide; this odorless, colorless poisonous gas is emitted by all combustion engines and onboard motor generators.

## Taggart, Schmidt win Glenn English scholarships

Anneliese Taggart of Vermillion recently landed a \$10,000 scholarship award presented by the National Rural Electric Cooperative Association (NRECA).

Carter Schmidt of Colman also won a \$1,000 scholarship through the Glenn English Youth Tour Alumni Scholarship program.

Taggart and Schmidt were participants in the 2016 NRECA Washington Youth Tour. Taggart was sponsored by Clay-Union Electric Corp., while Schmidt was sponsored by Sioux Valley Energy.

Taggart was elected by her peers to join the Youth Leadership Council. She participated in a grassroots panel discussion at NRECA's Annual Meeting last year and also helped teach a

course called "Bridging the Gap" to encourage young adults to vote.

Now in its fifth year, the Glenn English National Cooperative Leadership Foundation has awarded nearly \$100,000 in scholarships to NRECA Youth Tour alumni.

The Glenn English scholarships are one of the few sources of private scholarships for college students. Applicants are required to have completed one year of college as a full-time student.

Glenn English, former CEO of NRECA, spent his career championing the co-op business model and fighting to improve the quality of life for all Americans. A native of Oklahoma, he served 10 terms in Congress.

## KIDS CORNER SAFETY POSTER

**"Danger! High voltage! This means stay away!"**

**David Biggins, 10 years old**

David Biggins is the son of Jessy and Katie Biggins. They reside in Gregory, S.D., and are members of Rosebud Electric Association.

Kids, send your drawing with an electrical safety tip to your local electric cooperative (address found on Page 3). If your poster is published, you'll receive a prize. All entries must include your name, age, mailing address and the names of your parents. Colored drawings are encouraged.

# Goodies from the Garden

## Mashed Potatoes with Kale

4 med. potatoes	1/4 c. grated cheese (cheddar or Colby)
2 Tbs. butter	
1 Tbs. milk or cream	1-1/2 c. chopped raw kale, mid-ribs removed

Peel potatoes if desired, cut into chunks, boil until tender, about 15-20 minutes. Drain, mash and add remaining ingredients. Stir until well combined. Serve with sea salt and pepper. *Mary Jessen, Holabird, SD*

## Cabbage Salad Bowl

4 cups shredded cabbage	1/2 tsp. salt
1 c. shredded carrots	2 Tbs. sugar
2 Tbs. tarragon vinegar	1/2 c. light raisins
1/4 c. mayonnaise	1/4 c. orange juice

Soak raisins in orange juice while preparing vegetables. Combine cabbage, carrots, sugar and salt in a bowl. Add mayonnaise along with raisins and juice. Toss lightly. Refrigerate until time to serve. Serves 8. *Verna Knapp, Waubay, SD*

## Balsamic Vegetable Salad

3 lg. tomatoes, wedged	1/4 c. balsamic vinegar
3 med. cucumbers, peeled, halved and sliced	3 Tbs. water
1/2 c. olive oil	1 envelope Italian dressing mix

In a salad bowl combine tomatoes and cucumbers; in another small bowl whisk oil vinegar, water and dressing mix. Pour over vegetables and toss to coat. Yields: 6 servings. *Jane Barthel, Elkton, SD*

## Rhubarb Upside Down Cake

Yellow cake mix	3-4 c. sugar
4-6 c. rhubarb, chopped	1 pint whipping cream

Mix cake mix as directed. Put in a 9x13-inch pan. Mix rhubarb with sugar; pour over cake. Pour whipping cream over mixture and bake at 350 for 30-45 minutes. *Shirley Dreher, Clark, SD*

## Zucchini Dish

1/4 c. cooking oil	1/2 med. green, red or yellow pepper cut in thin strips
1 lb. unpeeled thinly sliced zucchini	
1 lg. carrot, coarsely shredded	1/4 tsp. dried basil, crushed
1 lg. onion, chopped	Dash of pepper
3/4 c. chopped celery	1/2 c. taco sauce
1/2 tsp. garlic salt	2 tsps. prepared mustard
	2 medium tomatoes, cut in wedges

Heat cooking oil in a 10-inch skillet. Add sliced zucchini, shredded carrot, chopped onion, chopped celery, pepper strips, garlic salt, basil and pepper. Mix well, cook covered, over medium-high heat 4-5 minutes, stirring occasionally. Combine taco sauce and mustard; stir into vegetables. Add tomato wedges, cook uncovered, 3-5 minutes or till heated through. Makes 4-6 servings. Optional: sprinkle with shredded cheese of your choice. *Rachel Brezczinski, Marshall, MN*

## Stuffed Cherry Tomatoes

24-28 cherry tomatoes	1 medium cucumber, peeled and diced
1 package (8 ounces) cream cheese, softened	2 teaspoons minced dill
2 tablespoons mayonnaise	fresh dill, for garnish
3 green onion stalks, diced	

Cut thin slice off top of each tomato. Scoop out pulp. Invert tomatoes on paper towel to drain. In medium bowl, combine cream cheese and mayonnaise until smooth. Stir in cucumber, green onion and dill. Spoon mixture into tomatoes. Top with fresh dill. Refrigerate until ready to serve. [www.culinary.net](http://www.culinary.net).

Please send your favorite pasta recipes to your local electric cooperative (address found on Page 3). Each recipe printed will be entered into a drawing for a prize in December 2020. All entries must include your name, mailing address, telephone number and cooperative name.

# Winterize Your Manufactured Home

**Pat Keegan**

Collaborative Efficiency

**Make sure your water heater thermostat is set to medium.**

This column was co-written by Pat Keegan and Brad Thiessen of Collaborative Efficiency.

For more information on winterizing your manufactured home, please visit: [www.collaborativeefficiency.com/energytips](http://www.collaborativeefficiency.com/energytips)

**Dear Pat and Brad:** The last few months have been tough, and I'm dreading my manufactured home's high winter heating bills. What can I do to make my home more efficient without spending too much money? – Lance

**Dear Lance:** In difficult times like these, it's more important than ever to ensure the money we spend yields the results we need. Here are five tips for winterizing your manufactured home, which can help you capture some significant savings. It's worth noting that some of these suggestions are quick, easy and cheap, but some will require more money than you may want to spend. Choose the approach that works best for your home and budget.

## 1. Furnace

It doesn't cost anything to lower your thermostat. Clean or replace your furnace air filter as often as recommended. If you heat your home with an electric or propane furnace, you can cut your heating costs by installing a heat pump. Ductless heat pumps are efficient and eliminate the problem of leaky furnace ducts. If you don't have the budget to make this investment out of pocket, you may qualify for a loan. It's possible that your energy savings would cover the loan payment.

## 2. Water Heater

You pay a lot to heat water. Make sure your water heater thermostat is set to medium, between 120° F and 140° F. Energy efficient showerheads can also save energy. Some are equipped with a button or valve that allows you to reduce or stop the flow while you lather up. Another fairly simple fix is to insulate the first several feet of the hot water pipe where it exits the tank. If there is room around your water heater, you could also wrap the tank with an insulation jacket, which you can purchase from a home supply store for about \$20. If your water heater uses gas or propane, be careful not to restrict the air needed for combustion or install insulation too close to the exhaust flue.

## 3. Ducts

Leaky furnace ducts are often a major source of energy loss. A simple first step is to make sure all supply and return registers are open and are not covered by furniture or rugs. Closed registers can really take a toll on your heating and cooling system. You might also be able to save energy by sealing your ducts at the floor registers. The biggest leaks, however, are likely under your manufactured home and could require the services of a contractor to locate and seal. Check with your local electric co-op to see if they can recommend local contractors who can provide this service.

## 4. Windows and Doors

That window A/C unit that kept you cool all summer can be a major source of heat loss in the winter. Before the cold hits, cover it up – or better yet, remove it during winter months. Another fairly easy way to cut down on energy loss is to install window insulation kits - these are plastic, disposable sheets that are stretched over window and held in place with double-sided tape. Thick curtains can also do a remarkable job at cutting drafts and adding insulation around a window. The final and most involved step is to fill cracks and holes in walls and around windows and doors with caulk, filler and/or expanding foam.

## 5. Floors

Cold floors can be costly and uncomfortable. The easiest solution is to lay down area rugs for additional warmth. But to really get the floor comfortable, you may have to venture into the crawlspace and insulate the floor or skirting. If you're not sure how to do this, there are several video tutorials available online.

With these simple steps, you can look forward to a cozier and less-costly winter!

# Electric Equipment Use on the Farm is a Trend on the Upswing

South Dakota's farmers have worked for generations in fields across the state. They have seen first-hand how farming equipment has improved over the decades to increase efficiency and to feed an ever-growing population.

A major new change for farming equipment is the trend of switching fossil fuel-powered farming equipment towards electric equipment. This trend builds on the idea of beneficial electrification, where switching to an electric end-use technology satisfies at least one of the following conditions without adversely affecting the others: saving consumers money over time, benefiting the environment, improving product quality or consumer quality of life, and fostering a more resilient grid.

Historically, the most common form of electrification for farms has been electric irrigation pumping systems. Irrigation systems are crucial for many farmers and can make or break the crop yield for the year. Water heaters are the second most-used forms of electric technology on farms. They can be used for many purposes, like dairy farm processing, sterilizing equipment and general cleaning. Choosing an electric water heater for the right application depends on efficiency, size, recovery speed and peak temperature.

There are many benefits of replacing diesel motors with electric motors. Highly efficient electric motors can operate at 90

percent efficiency, which helps to provide cost savings over time, compared to inefficient diesel motors that only operate at 30-40 percent efficiency. Farmers can simply plug in the electric equipment without needing to refill a diesel tank. Overall, electric motors are cleaner, quieter and easier to maintain. Some farmers are making the switch to electric tractors as companies like John Deere, AgCo and others continue to perfect their own electric models. While electric tractors are more efficient, quieter and better for the environment, they can lack the battery

Electric irrigation pumping systems provide a reliable means of crop maintenance.

power that many farmers need for a long day of working in the fields.

But the largest barrier of converting to electric technologies is the cost. Both the price of the electric technology itself and for the wiring to connect it to the entire farm can be extremely costly. Even with savings on fuel costs over time, farmers

will be reluctant to replace their farming equipment because of high initial costs

However, there are federal and local government programs that can help lessen the upfront costs. Electric cooperatives can also help farmers in their local territory with energy audits, or with applying for funding from federal programs such as the Rural Energy Savings Program (RESP) or the Rural Business Development Grants (RBDG).

Besides electric irrigation systems and water heaters, the availability of other electric farming technologies is much less common, such as grain dryers, thermal electric storage systems and heat pumps. Many of these electric technologies are still in the early stages of commercialization and have not fully entered the ag market.

The accessibility of these other technologies will depend on a variety of factors, like the type of farm, electricity prices versus fossil fuel prices, and any incentives to decrease upfront costs for buying new

equipment. Despite these challenges, there are opportunities for expansion, especially for electric tractors and other electric farm vehicles which are used on many different types of farms. With more time and investment, electric farming equipment will likely become more widespread in the coming years.

Sioux Valley Energy donated food and helped raise more than \$3,000 for booster clubs in Brandon, Hartford and Pipestone, MN.

# Local Co-op Events Provide Fun, Food and Festivities for Sports Fans

**Ben Dunsmoor**

Contributing Writer

In northwest South Dakota, clashes on the football field between rival schools are the main attractions on Friday nights. It is where community members can count on connecting with friends and neighbors. It is also a place where high school sports fans can count on seeing employees from Grand Electric Cooperative cooking up a pre-game meal.

“We see people of all ages at the tailgate parties,” Grand Electric Cooperative Marketing/Tech Specialist Rachel Eggebo said.

The Bison based cooperative began hosting block parties in the summer months nearly 20 years ago to reach out to the community. In 2009, Grand Electric transitioned to serving up brats, hot dogs, and chips before high school football games to reach families that were busy attending school activities. The co-op says it has been a great way to serve the community and show support for local schools.

“It gives us an opportunity to show our membership that we are there for them. Occasionally, it might be the only time we have to communicate with our busy members,” Eggebo said.

Grand Electric is taking a cautious approach to its tailgate parties this year due to concerns surrounding COVID-19. But, if the players are on the field, the co-op is committed to serving up free food at five different games this fall. Grand Electric will make some modifications to the tailgate parties by packaging the food and making it a “grab-and-go” style event for fans.

Grand Electric is not alone in its efforts to partner with local schools and reach out to the community with fun pre-game events. Butte Electric plans to host a tailgate party before the Belle Fourche and Spearfish game this fall. West River Electric holds a tailgating event before the Wall and New Underwood football game and sponsors a basketball tournament in Union Center every November.

Arm wrestling contestants square off during a tailgate party and family fun day hosted by Grand Electric.

Sioux Valley Energy in Colman is also on the tailgating bandwagon. Sioux Valley started hosting events before football games to help its local schools raise money.

“As school funding becomes tighter, booster clubs - and other school organizations run by parents - serve an important purpose,” Sioux Valley Director of Communications and Government Relations Carrie Vugteveen said. “Sioux Valley Energy feels that supporting these efforts helps the co-op live out its guiding principle of ‘commitment to community.’”

Sioux Valley hosted three tailgate parties in 2019 to raise money for booster clubs in Brandon, Hartford, and Pipestone, MN. Sioux Valley bought all the food and asked for a free-will

Lyon-Lincoln Electric Co-op in Tyler, MN, helped to host a tailgate party where the main attraction was the co-op's Tesla electric vehicle.

donation from fans during the meal. The three events raised more than \$3,000 combined for the booster clubs.

FEM Electric Association in Ipswich also partners with local schools to raise money during athletic events. FEM Electric donates 60 cases of bottled water to each school district within its service territory every year. The schools can sell the water in their concession stands and keep all the profits. Each water bottle has an electrical safety message printed on the label which translates into a big win for both the school and the co-op.

**The schools can sell the water in their concession stands and keep all the profits.**

“We wanted to contribute something to help out the various school programs and at the same time get our safety message out to kids and everyone,” Carol Schaffner with FEM Electric Association said.

Lyon-Lincoln Electric Cooperative in Tyler, MN, hosted a “Tailgating with Tesla” party before the Minneota and Canby football game last fall. The co-op partnered with a local youth group to host

the event. The co-op bought all the food and the youth group kept all the proceeds from the tailgate party to help pay for a mission trip. It was an opportunity to raise money for a good cause and for Lyon-Lincoln Electric to showcase its Tesla and talk about the benefits of electric vehicles.

“These events are a win-win for the cooperative and the community,” Lyon-Lincoln Electric Manager of Marketing and External Relations Brian Jeremiason said. “The co-op is able to deliver a message to a targeted audience and visit about other topics that community members may have. The community benefits by having a face-to-face opportunity to visit with their co-op.”

Electric co-op participation in school events is widespread across South Dakota. Northern Electric Cooperative in Bath, Dakota Energy in Huron, Charles Mix Electric in Lake Andes, and Central Electric in Mitchell all participate in local homecoming parades. Lacreek Electric in Martin sponsors a t-shirt toss during basketball and football games. Dakota Energy also hosts “co-op night” during local basketball games. And, Central Electric hosts free popcorn nights at high school basketball and football games to promote electrical safety and give back to the school and community.

So, whether it is a tailgate party, a fundraiser, or a t-shirt toss, it is likely that electric co-ops will be supporting their

local schools and communities this fall and winter.

“High school sports are wonderful opportunities to reach out to our communities,” Jeremiason said. “Young and old all attend and we can communicate with families as a unit which can be difficult sometimes with the busy lives most families are living.”

FEM Electric Association donates bottled water with unique labels to raise funds for schools in the co-op's service area.

## Visit Co-op Connections Plus

Take a moment to visit our new online companion to Cooperative Connections. Co-op Connections Plus is a YouTube channel that features a more in-depth treatment of stories appearing in this publication as well as other subjects of interest to rural South Dakotans.

Search for “Co-op Connections Plus” and you’ll find videos on human trafficking, the State High School Rodeo finals and grain bin safety. Be sure to “like” and “subscribe.”

# Raising the bar keeps crews busy

BHEC line crews have been very involved with the Sheridan Lake Road construction project. Above, crews add a cross arm to a laminated pole to increase the clearance of the line above the new road bed. The added road fill also required adding treatment to the pole base that will be covered with the additional dirt. Below, because of the raised road bed, several poles needed cross arms to maintain a safe distance from the road. The project also required BHEC crews to move underground wires that were in the right-of-way. The road rebuild will be from the Rapid City city limits to Highway 385 and require other line moves for the co-op.

Portions of laminated poles that are currently above ground were treated to protect them after they are buried by fill for the new Sheridan Lake Road.

The Sheridan Lake Road construction project required BHEC to move some of the underground cables serving area subdivisions and businesses.

# Tree removal is a delicate operation

Cutting trees near power lines is no easy task. Crews need to be aware of where the power lines are, where the tree will fall and what is on the ground around the tree.

Black Hills Electric Cooperative does the majority of rights-of-way maintenance and tree cutting on its own power lines. The co-op has two full-time rights-of-way crews and utilizes linemen when those crews are not busy maintaining and building lines and keeping members' power on.

Please let the co-op know if you have trees near the co-op's power line that could strike or fall through the line. The co-op will trim or drop those danger trees at no cost to the you. If you start cutting a tree but don't believe you can safely drop it, call the co-op, we will finish the job.

If a tree does make contact with the power line, do not touch it or try to get it off the power line. You could be electrocuted.

Regardless of how great of a sawyer you are, removing trees from or near power lines requires people trained to work near the lines.

Contact the co-op at 673-4461 or 1-800-742-0085 to report danger trees.

**After using a bucket truck to limb this tree, BHEC's crews used a digger truck to carefully lift part of the trunk over the homeowner's roof. BHEC's rights-of-way program has helped reduce outages caused by trees that are in danger of making contact with the lines. Please contact the co-op if you see a danger tree.**

**A maze of wires surrounded this tree that was recently removed by co-op crews. The job required a bucket truck and digger truck to safely remove it.**

## Win \$300 for Pre-registering

Pre-registering for the September 24 special meeting helps the co-op keep costs low by purchasing only the meals that we need.

You may pre-register by filling out and

returning the postcard included with your special report that will be mailed on September 1, or by e-mailing us at [bhec@bhec.coop](mailto:bhec@bhec.coop) or by calling 673-4461 or 1-800-742-0085.

The pre-registration deadline is Tuesday, September 15. In addition to saving the co-op money, you might win a \$300 cash prize or one of two \$100 cash prizes for

Pre-register at  
[bhec@bhec.coop](mailto:bhec@bhec.coop)  
You may also  
pre-register by  
calling 673-4461

registering by September 15.

This year's meeting will be at Roy's Black Hills Twin Drive-In Theater at Hermosa. Enter through the west gate. BHEC employees will be there to check registration and help park.

South Dakota's Rural Electric Cooperatives are adapting to the expectations of the next generation of co-op members.

# NEXT GENERATION

## Young adults figure prominently in the future of the rural electric cooperative movement

**Billy Gibson**

Contributing Writer

It's getting harder and harder to find people who can provide a first-person account of what it was like when electrical power came to their communities.

The nation's rural electric program sprang to life more than 80 years ago when an executive order by President Franklin Roosevelt created the Rural Electric Administration (REA). The REA issued low-cost loans that gave local communities the ability to build out power delivery systems to serve their own farms, homes and businesses.

But relatively few of the members served by those cooperatives today actually witnessed the transformation that took place when thousands of small towns and hamlets across the country began

enjoying the benefits made possible by electrical power.

Though many characteristics of electric co-ops have stayed the same – democratic control, focus on quality service, accessibility, commitment to community – other elements have certainly changed over the decades. For instance, some cooperative service areas that were once rural have become suburban as population centers have expanded into spaces that were once sparsely populated farms and fields.

Cooperatives are also taking advantage of modern technology to broaden their menu of services available to members, such as online account management systems, energy audits, pre-pay programs, automated meter reading, renewable power and more.

Yet another change is the generational shift taking place as older board directors, managers, employees and consumers are being replaced with younger folks who have different ideas, different approaches, different plans and different expectations.

In South Dakota, co-op leaders say the changing dynamics present an opportunity to bring innovative ideas and new concepts to the table – all centered around the ongoing mission to deliver power that is safe, reliable, affordable and accessible.

Evan Buckmiller is manager of Kingsbury Electric Cooperative (KEC) based in DeSmet. He is part of a group of younger general managers who have taken the reins at various electric co-ops in the state. He said that over the past decade KEC has seen a 100 percent turnover in personnel and that every current employee

Co-ops will continue their commitment to both personal and digital service.

is under the age of 35. The result is a prevailing mindset that's not averse to searching for new ways to "work smarter."

"Our employees are constantly exploring new avenues to operate more efficiently and effectively," Buckmiller said. "They understand that the money people pay for power doesn't grow on trees. Our members expect value, and it's our job to make sure we're using the latest technology to minimize operating costs while improving service and convenience."

He said one advantage of having a younger work force is a greater acceptance of change, more flexibility and being open to new approaches to addressing issues.

"We've made wise investments in new equipment that we never would have considered in the past," Buckmiller said. "Our employees don't mind trying something new. They don't mind going through the training process. Having grown up in the internet age, they adapt well to learning things like new computer-based applications and software."

Some of those changes include a new barcoding program to track inventory, using iPads for preparing timesheets and taking service orders online.

Jay Spaans, manager of Douglas Electric in Armour, echoed Buckmiller's observations regarding younger employees. Two of his seven staff members are expected to retire in the not-too-distant future. They represent a combined 96 years of service.

"That's a lot of institutional knowledge

**Kingsbury Electric Co-op Manager Evan Buckmiller leads a staff of young employees who understand the co-op's mission.**

walking out the door, and as a manager you wonder if the next generation will be as dedicated to the co-op as them," Spaans said. "I'm sure that whoever we hire will have grown up with technology and will have new ideas. I see that as a benefit."

When it comes to engaging younger consumers, co-ops across the state maintain social media platforms such as Facebook, Instagram, Twitter and others. West River Electric based in Wall, is representative of many South Dakota co-ops that use an array of digital tools to track the organization's member engagement.

Public Relations Manager Robert Raker said diversity and the strategic use of various social media channels is the key to making sure the lines of communication remain open across the age spectrum.

"We use Facebook and our printed newsletter to appeal to our older members," he said. "We use Instagram and Tik Tok to reach our younger members, and we're beginning to deploy LinkedIn to interact with our technology and business accounts."

There's even a specific approach to communicating internally, Raker said.

"We're using Snapchat to communicate with some of our crews in the field because

**One advantage of having a younger work force is a greater acceptance of change, more flexibility and being open to new approaches.**

we've found that our young linemen prefer to use Snapchat rather than a conventional email account."

Chad Felderman, CEO/General Manager at Dakota Energy in Huron, said it's important for co-ops to balance their approach so that the interests of all age groups are taken into account.

Part of that strategy of fostering connect- edness across generations is to get out of the office and meet members at events that attract a cross-section of people.

"In order to interact with all age groups, we have been present at sporting events, parades and event booths. It's more difficult due to the pandemic, but this is our goal," Felderman said. "This has allowed us to engage with members of all ages and creates an overall increase in knowledge of who we are and what services we provide. Utilizing Facebook, the website and text messaging has been a great way to inform members and makes us more visible in our communities."

Matt Klein, General Manager at Union County Electric in Elk Point, said he has noticed the older generation has been receptive to change, albeit at a more measured pace.

"In general, our older members want to come to the office and pay by check and get a receipt, while our younger members are more comfortable paying online, having us withdraw directly from their back account, or setting up recurring charges to their credit card," Klein said. "Now that we offer these other payment options, we are seeing more of the older generation using them. So they are clearly becoming more comfortable with this, but are a bit slower to adopt the change."

**Younger members expect their cooperative to provide information through social media platforms.**

Co-op members are increasingly capable of managing their appliances from a smart phone or tablet.

## CO-OP TECH

### Electric Co-ops Adopt High-Tech to Improve Service

By Billy Gibson

Contributing Writer

The terms “rural” and “technology” may appear to be contradictory concepts.

However, rural electric cooperatives all across the country are adopting advanced scientific techniques and methodologies while leading the charge to discover bold new ways to deliver power that is safe, affordable, reliable and accessible.

Engineers can use connectivity technology to control fluctuations in voltage and frequency and ensure system stability.

For instance, more than 100 cooperatives nationwide are working behind the scenes to build out high-speed broadband networks in their service areas. Many others are involved in developing clean energy sources, implementing automated meter-reading systems, applying state-of-the-art cybersecurity safeguards, adding convenience to the bill-paying process, exploring ways to use energy more efficiently and much more.

South Dakota’s rural electric cooperatives are among the prime-time players in this high-tech game.

H-D Electric Cooperative, which is based in Clear Lake and serves 3,600 meters, recently completed a pilot project in collaboration with the National Rural Electric Cooperative Association (NRECA).

The goal of the research program funded by the U.S. Department of Energy was to field test the effectiveness of an automated load management mechanism called GridBallast.

When it comes to properly managing grid-scale electrical power, load control is paramount for both safety and efficiency reasons. Engineers vigilantly monitor and control any differences detected in voltage and frequency along power grids that can stretch for many miles. Excessive fluctuations in voltage and frequency can cause damage to devices all along the grid and present a safety hazard to members.

These fluctuations have always been a chief impediment in the development of renewable energy sources such as wind and solar. Renewable power sources are often described as “intermittent” because of the variation in their productivity. The task of load management is made more challenging when clouds block the sun and the wind changes speed and direction.

GridBallast is a technology that can detect changes in the flow of energy and quickly and automatically adjust the load on the demand side by switching on or off water heaters or other connected devices and circuits in the home. It was a severe and persistent frequency imbalance that led to the historic blackout that occurred throughout the Northeast region in 2003.

H-D Electric CEO and General Manager Matt Hotzler got the co-op involved in a pilot program testing the GridBallast device.

## The ability to control demand has been an effective means of managing peak load.

managed in the future.

Hotzler said that the co-op is always eager to explore new ways to promote a more stable system while maintaining affordable rates.

“With our current load management system that we have in place, it is certainly important right now for our rates and our members. I think that’s why we have such a good buy-in from our membership,” Hotzler said.

Hotzler noted that H-D Electric has 2,150 water heaters on its existing load management program that can be controlled by the co-op’s wholesale supplier, East River Electric. H-D Electric is one of 250 other co-ops in 35 states that have similar programs.

That ability to control demand has been an effective means of managing peak load. But as more renewable power sources enter the grid, automated control performed through a device like GridBallast may take on greater importance in years to come.

“As distributed generation starts to come on a bit more, and possibly becomes majority renewable, it probably will have a real role in stabilizing the system,” Hotzler said. “The Department of Energy projects that renewable power will be the single largest generation source on the North American grid by 2045. That will require finding new ways to manage the grid.”

GridBallast, developed in collaboration with Carnegie Mellon University, Eaton and SparkMeter, also has the potential to reduce a system’s dependence on its communications network while protecting against cyberattack.

H-D Electric CEO and General Manager Matt Hotzler expressed reservations about how autonomous load control would be received by the co-op’s consumers.

He invited 15 H-D Electric members to participate in the pilot program over a span of three months. After the study was concluded, Hotzler reported that the results were promising.

“We didn’t see any problems at all,” Hotzler said.

Paramount to this load management approach, Hotzler pointed out, is that it opens up a plethora of new possibilities regarding the types of loads that can be

Intermittent sources of electricity will make automated load management more important than ever.

East River Electric has also been involved in another research partnership with NRECA and Dakota State University in Madison. The Connected Home Research Project based at the university’s Madison Cyber Labs center was designed to create a “home hub” that would enable smart devices in the home to communicate with the cooperative.

East River Electric is a generation and transmission entity that provides wholesale power to 25 distribution member systems in eastern South Dakota and western Minnesota.

Chris Studer, chief member and public relations officer for East River Electric, said, “While current technologies can help manage electricity usage and benefit consumers, we noticed a gap between the capabilities of those technologies and the needs of our utility network to connect to those technologies. We hope to close that gap through this project.”

Studer said cooperative consumers have demonstrated their eagerness to adopt smart-home technology to exercise more control over their energy use, save money and add convenience.

While consumers can use their smartphone devices to adjust thermostats and lighting, many apps designed for this purpose are produced by different companies. Home Hub is an effort to develop an integrated dashboard that would allow these programs to communicate through one centralized source.

East River invested roughly \$14,000 on appliances, cabinets and technology at the lab facility. The research space at Madison Cyber Labs resembles a kitchen equipped with smart products and appliances such as lighting, window coverings, a water heater, security system and a washer and dryer. Plans include adding an electric vehicle charger and smart locks.

**Note:** Please make sure to call ahead to verify the event is still being held.

South Dakota's Touchstone Energy® Cooperatives will not have a booth this year at the state fair due to COVID-19 safety concerns.
