Black Hills Electric

A Touchstone Energy® Cooperative

June 2020 Vol. 21 No. 2

Challenging and different times

Same goals and mission

Walker Witt

CEO and General Manager wwitt@bhec.coop

Your board took action to cancel the annual meeting and schedule a members' meeting on Thursday, September 24th. Your board of directors held their April board meeting telephonically. To my knowledge, that is the first time that the monthly board meeting was not held in person.

One significant agenda item acted on was the 2020 Annual Meeting, scheduled for June 4th. The Bylaws state that the annual meeting shall be during the month of May or June and not having the annual meeting does not negatively impact the cooperative. The Bylaws further state that if an election of directors is not on the designated day (annual meeting), then, a special meeting shall be conducted for that purpose. Your board took action to cancel the annual meeting and schedule a members' meeting on Thursday, September 24th. During that meeting, there will be an election to fill Al Perry's position. Al did not seek re-election this year, but has graciously agreed to continue as your director until his successor is elected. In addition to the election, the September 24th meeting will have reports to the membership and will be a celebration of our co-op's 75th anniversary.

Because the Annual Report will not be mailed out until September, your directors felt it was important to publish the 2019 audited financial statements in this month's *Cooperative Connections*. Please see those statements on pages 10-11. Your co-op ended 2019 in a solid financial position, and we are pleased to report that the independent auditing firm, Ketel Thorstenson, issued an unqualified audit opinion.

The other significant agenda item discussed during the April board meeting was the measures being taken to ensure that your co-op is meeting members' needs and providing safe electric service, while doing everything reasonably necessary to keep the employees and our members safe. The office is closed, but payments can still be placed in the dropbox and a phone is in the foyer, which has a direct connection to a member service representative if a member is at the office and needs to talk to an employee. Currently, some of the member and office services employees are at the office from 7:30 a.m. until 5 p.m. while others are working those hours remotely from home. Our operations and engineering crews are working staggered shifts and are reporting to the job site in separate vehicles.

The last thing I want to discuss this month is disconnects. I want to be transparent on why your co-op, at least at the time of writing this article, is continuing to disconnect and explain the process prior to disconnecting a member. Your co-op is committed to working with members that are experiencing financial hardships as a result of the coronavirus, and we pledge to work with those members that are struggling. Each disconnect is considered on a case by case basis and we encourage our members to be proactive and contact us to make arrangements if they cannot pay their electric bill.

Disconnect notices are currently being delayed a week and cooperative employees are making every effort during that time to contact those members that would have received a disconnect notice. If an employee is unable to reach a member, or if a member refuses to work out a payment arrangement, a disconnect notice will be mailed to those members. Actual disconnects have also been delayed a week, and after the notice is mailed, and prior to disconnecting, our employees will make another attempt to contact those members. If we have not heard from a member or the member makes no arrangement to pay their bill, or makes an arrangement, but fails to follow through on the arrangement, the service will be disconnected.

Disconnecting a member is always our last resort. Sometimes those disconnects are

BLACK HILLS ELECTRIC COOPERATIVE CONNECTIONS is the monthly publication for the members of Black Hills Electric Cooperative, 25191 Cooperative Way, P.O. Box 792, Custer, S.D. 57730-0792. Families subscribe to Cooperative Connec tions as part of their electric cooperative membership. Black Hills Electric Cooperative Connections' purpose is to provide reliable, helpful information to electric cooperative members on matters pertaining to their cooperative and living better with electricity. Also available at www.bhec.coop.

This cooperative is an equal opportunity provider, employer and lender. If you wish to file a Civil Rights program complaint of discrimination, complete the USDA Program Discrimination Complaint Form, found on-line at http:// www. ascr.usda.gov/complaint_filing_cust.html, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter by mail to U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Ave, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or e-mail at program.intake@usda.gov.

Subscription information: Black Hills Electric Cooperative members devote 50 cents from their monthly electric payments for a subscription. Non-member subscriptions are available for \$12 annually. Periodicals Postage Paid at Black Hills Electric Cooperative, 25191 Cooperative Way, Custer, S.D. 57730-0792, and at additional mailing offices

Postmaster: Please send address changes to Black Hills Electric Cooperative, P.O. Box 792, Custer, S.D. 57730-0792. Address all other correspondence to: Cooperative Connections, P.O. Box 792, Custer, S.D. 57730-0792; Telephone: (605) 673-4461; Fax: (605) 673-3147; e-mail: bhec@bhec. coop; website: www.bhec.coop

Summer Demand Times Begin June 1

Black Hills Electric Cooperative's summer demand hours begin on Monday, June 1. Members on the demand rate will want to manage their electric use from 2-8 p.m. Monday through Friday.

Managing your demand during those times can save you money.

From June 1 through September 30 co-op members use the majority of their electric energy from mid-afternoon to early evening, during the heat of the day. Because of this, the cost of energy the co-op buys to meet the load is higher. Using large loads during off-peak times saves you and your cooperative money on energy costs.

Goals and mission

(Continued from page 2)

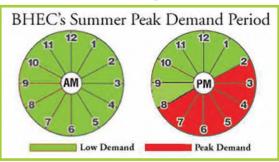

the result of renters moving and not contacting us. Other times, members just assume that the co-op is not going to disconnect. Once disconnected, those members usually contact us and make a payment arrangement so the service can be reconnected. Disconnect and reconnect fees have been waived for the current time. Sadly, sometimes, the only way a member will contact us to discuss their situation is if they are disconnected.

We want to be clear with our members that not disconnecting is not he same as not billing. Waiving disconnections without a suitable payment arrangement only ensures an eventual permanent disconnect and a significant bad debt that the rest of the membership must make up

These are certainly difficult and challenging times, but be assured that your electric cooperative is doing everything in its power to work with our members, to keep our employees and our members safe, and to continue to provide you all with safe and reliable electric service.

Stay healthy,

Walker

For those with demand controllers, this is a good time to check the controller's clock.

Join us for a celebration of 75 years

Black Hills Electric Cooperative's bylaws mandate that your memberowned electric cooperative conduct an annual meeting of members each year in either May or June. This year is the cooperative's 75th anniversary of providing electric service to members.

However, because of restrictions caused by the Covid-19 virus, we are unable to have our annual meeting in May or June.

Instead, we would like to invite you to a meeting celebrating those 75 years on Thursday, September 24, at the Ramkota Convention Center II in Rapid City.

We can't call it an annual meeting but it will be conducted like an annual meeting with all the good food, good friends, reports, election and prizes.

Please watch for details in upcoming Cooperative Connections magazines. The report to members will be mailed in early September. Included in the report will be the pre-registration information. Please use the postcard or call 673-4461 or 1-800-742-0085 to register for the meeting. Members who pre-register are eligible for a drawing for \$100.

Stay Safe at Home

Each year, electrical malfunctions account for thousands of home fires, injuries, death and property damage. The average American home was built in 1977, and many existing homes simply can't handle the demands of today's electrical appliances and devices. Keep safety in mind with these helpful tips from the Electrical Safety Foundation International.

Learn the warning signs of an overloaded electrical system:

- Frequent tripping of circuit breakers or blowing of fuses
- Dimming of lights when other devices are tuned on
- Buzzing sound from switches or outlets
- Discolored outlets
- Appliances that seem underpowered

How to avoid overloading circuits:

- Label your circuit breakers to understand the different circuits in your home.
- Have your home inspected by a qualified electrician if older than 40 years or if you've had a major appliance installed.
- Have a qualified electrician install new circuits for high energy use devices.
- Reduce your electrical load by using energy efficient appliances and lighting.

Working from home?

Follow these electrical safety tips to keep you and your home safe from electrical hazards.

- 1) Avoid overloading outlets.
- Unplug appliances when not in use to save energy and minimize the risk of shock or fire.
- 3) Regularly inspect electrical cords and extension cords for damage. Extension cords should only be used on a temporary basis.
- 4) Never plug a space heater or fan into an extension cord or power strip.
- 5) Never run cords under rugs, carpets, doors or windows.
- Make sure cords do not become tripping hazards.
- Keep papers and other potential combustibles at least three feet away from heat sources.
- 8) Make sure you use proper wattage for lamps and lighting.
- 9) Make sure your home has smoke alarms. Test them monthly, change batteries annually and replace the unit every 10 years.

The Secret Ingredient

Electric cooperative members know that the recipes published in their local electric cooperative magazine are time-tested by their neighbors. The recipes feature ingredients that are readily available in the region (there may be a few somewhat exotic components). For the most part, if you have a can of cream of something soup, a pound of ground beef, some flour, eggs and a little salt and pepper, you probably have the basis of many a recipe found here. We raise our mixing spoons to the hundreds of co-op members who have sent in their recipes over the years.

Dawn Trapp

And, we applaud the work of Dawn Trapp who has reviewed the recipes, compiled them for print and made sure our South Dakota, Minnesota and Nebraska cooks shine for their neighbors. Trapp is retiring after a 30-plus year career with South Dakota's electric cooperatives. Since 2000, she has compiled the recipes featured in this magazine. She previously compiled recipes for the South Dakota High Liner Magazine and edited Home Cooking: 50th anniversary commemorative cookbook of the South Dakota High Liner Magazine in 1998.

For a .PDF compilation of the first 20 years of recipes found in your local *Cooperative Connections* publication, contact your local electric cooperative.

KIDS CORNER SAFETY POSTER

"Be safe: Don't shoot near power lines."

Gwen Smith, 10 years old

Gwen is the daughter of Jared and Heidi Smith, Lake Norden, S.D. They are members of H-D Electric Cooperative, Clear Lake, S.D.

Kids, send your drawing with an electrical safety tip to your local electric cooperative (address found on Page 3). If your poster is published, you'll receive a prize. All entries must include your name, age, mailing address and the names of your parents. Colored drawings are encouraged.

Chicken Lasagna

1 can cream of chicken soup 1 cup Parmesan cheese

1 can cream of mushroom

soup

1/2 cup milk

1 cup sour cream

3 cups diced chicken

3 cups shredded Cheddar

cheese

Lasagna noodles, cooked

Mix together soups and milk. In a separate bowl, combine sour cream, Parmesan cheese, diced chicken and cheese. Spread a thin layer of the soup mixture in the bottom of a 9x13-inch glass baking dish. Make a layer of cooked lasagna noodles. Spread an even layer of the chicken mixture. Top with another layer of soup. Repeat layers until gone. Bake at 325°F. for 1 hour.

Mary Hunt, Gary, S.D.

Pineapple-Pretzel Salad

2 cups crushed pretzels

1 (8 oz.) pkg. cream cheese, softened

1 stick butter, melted

1 (20 oz.) can crushed

1 cup sugar, divided

pineapple, drained

1 (8 oz.) container Cool Whip

Combine pretzels, butter and 1/2 cup sugar. Spread on a 9x13-inch pan. Bake at 400°F. for 7 minutes; cool. Break into pieces; set aside. In a large bowl, beat cream cheese and remaining sugar. Add Cool Whip and pineapple. Mix well; refrigerate overnight. Just before serving, add pretzel pieces.

Linda Rauscher, Aberdeen, S.D.

Cheesy Garlic Bread

1 cup Miracle Whip 1/4 tsp. garlic salt

1/2 cup sour cream 1 cup chopped onion

1 cup shredded yellow 1 loaf French bread

cheese

Combine salad dressing, sour cream, shredded cheese, garlic salt and onion. Cut the French bread length-wise. Cover both sides, cut-side up, with mixture. Sprinkle with parsley and paprika, if desired. Bake at 400°F. for 8 to 10 minutes. Cut diagonally for a pretty presentation.

Jane Ham, Rapid City, S.D.

S'mores Pie

Graham Cracker Crust:

2 tsp. ground cinnamon

1-1/2 cups graham cracker

7 T. butter, melted

1 T. plus 1 tsp. vanilla extract, divided

crumbs

1 (7 oz.) jar marshmallow

creme

1/3 cup sugar

Filling:

1 (4 oz.) pkg. cream cheese,

softened

3/4 cup heavy cream

1 (8 oz.) container frozen whipped topping, thawed

6 oz. semi-sweet chocolate, chopped

For the crust, mix all ingredients in medium bowl. Press into bottom and up sides of 9-inch pie plate. Set aside. For the filling, bring cream just to boil in small saucepan. Pour over chocolate in medium heatproof bowl. Let stand 1 minute then stir until smooth. Stir in cinnamon and 1 tsp. of the vanilla. Pour into prepared crust. Refrigerate 30 minutes or until chocolate is firm. (Freeze 15 minutes for faster chilling.) Beat marshmallow creme, cream cheese and remaining 1 T. vanilla in large bowl with electric mixer on medium speed until well blended. Gently stir in whipped topping until well blended. Spread evenly over chocolate layer in crust. Refrigerate at least 2 hours or until ready to serve. Garnish with chocolate curls or toasted marshmallows, if desired. Makes 8 servings

Nutritional Information Per Serving: Calories 600, Total Fat 36g, Cholesterol 75mg, Sodium 267mg, Carbohydrates 65g, Fiber 2g, Protein 4g

Pictured, Cooperative Connections

Taco Cheese Dip

1 (8 oz.) pkg. cream cheese, softened

1 (8 oz.) container sour

cream

1 pkg. taco seasoning

Shredded Cheddar cheese

Blend cream cheese, taco seasoning and sour cream well in serving dish. Spread shredded Cheddar cheese on top. Serve with chips.

Mary Ellen Luikens, Scotland, S.D.

Please send your favorite dessert, vegetarian or garden produce recipes to your local electric cooperative (address found on Page 3).

Each recipe printed will be entered into a drawing for a prize in December 2020. All entries must include your name, mailing address, telephone number and cooperative name.

The Kind of Audit You Want

Pat Keegan

Collaborative Efficiency

A home energy audit is the perfect place to start if you want to reduce your energy bills or make your home more comfortable.

This column was co-written by Pat Keegan and Brad Thiessen of Collaborative Efficiency. For more information on a home energy audit, please visit: www.collaborativeefficiency. com/energytips. **Dear Pat and Brad:** I need to reduce my energy costs and don't know where to start. You often recommend a home energy audit. What will an audit tell me? – Jacob

Dear Jacob: You've nailed it! A home energy audit is the perfect place to start if you want to reduce your energy bills or make your home more comfortable. An audit can also help you decide whether to invest in a new energy source like a solar array or a new heating and cooling system like a heat pump or whether it's time to upgrade your current system.

It's possible to conduct your own energy audit using a website or app. Online and app audits are great tools you can use to learn about energy use and potential efficiency upgrades, but an in-person, comprehensive energy audit provides much more information.

When things are back to normal and it's safe to have visitors in your home, there are typically two options for an in-home energy audit.

The least expensive is a home energy survey, sometimes referred to as a "walk-through" audit that is essentially a visual inspection. If you have modest goals about what you want to learn from an energy audit and if you are fortunate enough to find an experienced and knowledgeable professional, this type of audit might meet your needs.

The second, more comprehensive energy audit requires more time and utilizes several diagnostic tools. The average cost for this type of audit is about \$400. Check with your local electric cooperative to see if they offer energy audits or provide a discount or rebate.

A comprehensive energy audit will look at four main areas. The first is the envelope of your home, which includes all the places where the exterior and interior meet – roof, walls, doors, windows and foundation. A critical tool for testing the envelope is a blower door test, which has a powerful fan that is mounted in an exterior door frame and used to de-pressurize the home. The auditor can then identify how well-sealed your home is and locate any air leaks. Some auditors will work with you to seal leaks and continue to take blower door readings as the home is tightened up. One advantage of this approach is avoiding excessive air sealing. It's possible, in some homes, to tighten the home too much, so the energy auditor can determine when to stop sealing leaks so that a healthy supply of air infiltration is maintained.

Another tool auditors will use to look at your building envelope is a thermal imaging camera, which shows hot and cold spots that pinpoint exactly where insulation is needed on walls and ceilings. The camera works best when the exterior temperature is much colder or much warmer than the interior temperature.

The second focus of the audit is your home's HVAC (furnace/AC unit) system and water heater to see how energy efficient they are and whether they should be replaced. If your home has air ducts, the auditor can conduct a duct blaster test to see if your ducts are properly sealed. Ducts located in unheated areas are often a major source of energy loss.

The third area the auditor will review includes other energy end use, such as lighting, appliances and other "plugged-in" devices. The auditor may also suggest steps like energy efficient lighting or a smart thermostat.

The fourth area included in a comprehensive energy audit is health and safety. Does your home have the correct number and placement of smoke alarms and carbon monoxide detectors? Should your basement be tested for radon emissions? Make sure you get answers to these questions.

Some audits include a sophisticated energy analysis of your home using energy modeling software. These analyses can rank the different energy efficiency opportunities in your home from most to least cost-effective. This will tell you how much you can save if you invest in all the cost-effective upgrades.

After the energy audit is complete, the auditor should sit down with you and explain the findings in detail. This conversation should include a discussion of ways to operate your home to achieve more energy savings and more comfort.

A home energy audit may seem like an unnecessary expense, but it truly can save you money in the long run because it helps to ensure every dollar you put into energy efficiency pays for itself.

Yankton, S.D., Fifth-Grader Wins Arbor Day Poster Contest

Sienna Vera Weiman, a fifth-grade student at Sacred Heart Elementary School in Yankton, is the winner of the 2020 South Dakota Arbor Day Poster Contest. Sienna's poster was chosen out of 567 entries from fifth-graders all over the state.

Weiman's first-place poster was selected for its interpretation of the contest theme "Trees Are Terrific...In Cities and Towns!" Weiman will receive a \$125 cash prize and a certificate

of achievement and her poster will be featured on the division's poster contest promotional flier.

Weiman's teacher, Barb Geigle, will

receive \$175 for the purchase of educational supplies.

Abigail Ingham of Madison Elementary School in Madison, S.D., was selected as the second-place winner. Ingham receives a \$100 cash prize and a certificate of achievement. The third-place winner, Joclyn Vargason of Edmunds Central School in Roscoe, S.D., will receive a certificate and a \$75 cash prize.

The top 12 artists' posters will also be featured in the annual Arbor Day Poster Contest Calendar.

The annual Arbor Day Poster Contest is designed to help promote the importance of Arbor Day and tree planting and is open to all South Dakota fifth-graders. Amidst the COVID-19 pandemic, the poster contest provided children the opportunity to stay busy and learn about the importance of trees in their communities. The South Dakota Department of Agriculture's Resource Conservation & Forestry Division (RCF), the South Dakota Society of American Foresters, Aspen Arboriculture Solutions, LLC and the South Dakota Arborists Association sponsor the state contest.

Call Before You Dig

Calling 811 Remains An Essential Safety Step, Even During A Pandemic.

In light of the coronavirus pandemic, the South Dakota Public Utilities Commission is urging South Dakotans to be especially vigilant about utilizing 811's Call Before You Dig service to mark underground utilities and to exercise extreme caution with excavating projects.

"Underground utilities are always essential to the health and safety of South Dakota citizens, but with the current COVID-19 pandemic, these utility services are more important than ever," said PUC Chairman Gary Hanson. "Hospitals and their staffs rely on electricity and broadband networks to provide the best care for those in need. Our healthcare systems are already being stretched thin and damage to these utilities would only cause further strain to those on the front lines," he continued.

Whether you're landscaping, starting to build a new home or putting up a new fence, calling 811 at least two days before starting any kind of digging should always be your first step. Those two days give utility providers time to go out and mark all the natural gas, electricity, communications, water and sewer lines on your property. This simple step helps avoid injury to those working and damage to the essential infrastructure that not only keeps utilities func-

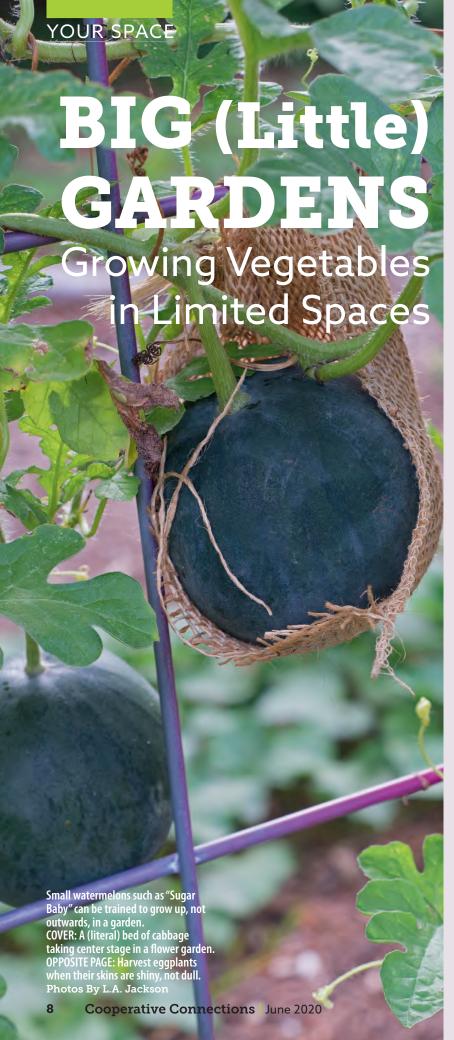

tioning properly, but also connects you to the world outside your front door.

"Each of us has been asked to do our part to flatten the curve of COVID-19 by practicing social distancing and making major changes to our daily routines. These necessary changes have made access to quality broadband more essential now than ever before. With students using distance learning to continue their education and many adults working from home, we really rely on quality internet to function in our everyday lives. Preserving those connections by following safe digging practices is important," said PUC Vice Chairman Chris Nelson.

Uneven surfaces, erosion and previous digging projects can all cause the depths of utility lines to vary and change over time, enhancing the risk of hitting an underground utility. For this reason, every digging project warrants a call to 811. Striking even a single line can result in service disruptions, serious injuries and costly repairs.

"Coronavirus has caused a lot of uncertainty but one thing you can be certain of is calling 811 will help ensure you remain safe and connected while working outdoors. Spending a little time outdoors is important for our health; especially during this outbreak when we're spending so much time at home. Remember, whether you're working, playing or just soaking up some sun, practicing safe distancing is an essential step to help flatten the curve no matter where you are," said Commissioner Kristie Fiegen.

South Dakota 811 is a free service. Homeowners and excavators with upcoming, outdoor construction projects must contact the South Dakota 811 center 48 hours before digging, excluding weekends and holidays. The center will then quickly notify all affected utility companies of your upcoming excavation plans and utility companies will dispatch crews to mark the underground lines at the respective dig site. To learn more about 811 and safe digging practices, visit www.SD811.com.

L.A. Jackson

Contributing Writer and Photographer

Spring has arrived! So, if thoughts of producing oodles of fresh, homegrown edibles have you ready to dig in the dirt, it's time to roll up those sleeves and start a vegetable garden!

While the physics of time and space dictate that big harvests naturally come from big gardens, for backyard growers who prefer to pass on the challenges of tending mega-plots through the long, hot summer or who simply don't have an abundance of planting areas, there are alternative ways to raise impressive passels of veggies – it is simply a matter of making make less do more.

Go to bed

First, for maximum production from limited growing areas, go with beds, not rows – in other words, place young plants or seeds according to their recommended spacing per plant and forget about distances between rows. Rows of plants looking like tidy lines of soldiers are better for large gardens in order to have paths to walk around, but this isn't necessary in small beds. Accessibility is, of course, still important, so, while you can stretch 'em as long as Texas, try not make beds over 4 feet wide – this shortens your reach into the plants and greatly minimizes embarrassing face-flops in the dirt.

Small wonders

Size isn't everything in gardening, especially when it comes to growing backyard edibles. There are many vegetable selections – often tagged with such labels as "Bush," "Dwarf" or "Patio," – that are modest in height and girth, but still quite capable of producing impressive crops.

The most common big veggie that can be found in smaller sizes is the tomato. There are a ton of cultivars available, but, for starters, give "Tiny Tim," "Bush Beefsteak" or "Early Wonder" a look. Keep in mind, however, that a majority of these slight-in-stature tomato selections are determinate, meaning they produce all the 'maters they are going to yield in a matter of weeks. Standard vine tomatoes, if kept healthy, typically crank out fruit continually over the long growing season.

Want a wider range of veggies in your small garden? Squash, watermelons, pumpkins, cucumbers, cantaloupes and green beans – all champs at chewing up space in a planting bed – can also be found in compact forms, either as young plants or seeds, at local garden shops in the spring.

Grow up

Don't think you have to stick to Munchkin-sized plants. Typical strong growers such as tomatoes, green beans, cucumbers and squash can't be allowed to crawl across small growing spaces, but they can be trellised, staked or caged to grow up rather than out.

Even the long, rangy vines of watermelons, pumpkins and cantaloupes can be trained upwards on vertical supports, but to avoid the dreaded drop-and-splat factor, it's not a bad idea to cradle the developing fruits in supporting burlap, nylon or cloth slings.

Suspension weight and size problems with standard pumpkins are obvious, but there are many cultivars, including "Spookie," "Jack O' Lantern" and "Sugar Pie," that yield smaller, more manageable 6- to 7-pound fruits. Ditto for big ol' watermelons, but with so-called "icebox" varieties like the popular "Sugar Baby" and its 8- to 10-pound melons available, it is possible to hang 'em high, too.

Growing vine crops on erect supports has other advantages besides saving space, starting with making harvesting easier. Also, vertical gardening improves fruit shape and, since beneficial air circulates through the foliage easier, can promote healthier plants.

Beyond the veggie patch

Looking for even more growing ground? Limited-space gardening with edibles doesn't need to be confined to small vegetable plots – in other words, anywhere you have dirt in your yard is a potential planting site. And many veggies can be easily inter-planted in the landscape as complements, rather than complications, to existing ornamentals.

One popular vegetable that bears the double standard of being both productive and pretty is the pepper. While blocky bell peppers might look a bit clunky in flower beds, there is a wide range of hot peppers that show off long-lasting fruits in many sizes, shapes and sizzling colors on relatively compact plants.

Like bell peppers, common pudgy eggplants probably won't qualify as eye candy in an ornamental garden, but there are vibrantly colored fruits of cultivars such as "Fairy Tale," "Prosperosa" and "Neon" that can also add extra visual sass to sunny flower borders.

And okra, which is closely related to the lovely hibiscus, stays true to its family ties with fancy foliage and delicate, hibiscus-like flowers. One particular standout beauty is "Red Burgundy," an heirloom selection that has been a veggie garden favorite for many years because its gorgeous (and tasty) scarlet pods never fail to turn heads.

Other decorative edibles with strong, distinctive profiles such as curly spinach, cabbage, loose-leaf lettuce (especially red-tinted varieties like "Red Sails" and "Lolla Rossa"), kale and Swiss chard (look for "Ruby Red" or "Bright Lights") are low-growing and, for vegetable plants, actually rather good looking. Any of these can be successfully incorporated as accent plants for perennial beds or flower gardens. In addition, root vegetables such as carrots, onions and radishes hide their crops below ground but freely flaunt flowing foliage that can be used to fill in the fronts of border plantings.

Many herbs are also great "double-duty" plants. Need examples? Rosemary's spiky leaves and delightful (as well as edible) bluish-purple flowers make it an appealing addition to any landscape setting. Bronze fennel's smoky look is a nice touch for container planters, while the rich, dark foliage of purple basil is a horticultural fashion statement waiting to happen. And curly parsley, with its deep emerald leaves, is an ideal alt-ornamental to line the front of a flower bed.

One word of caution about interplanting vegetables or herbs with other plants: If you spray any pesticides on neighboring ornamentals, make sure the chemicals are cleared for safe use on edible plants as well.

L.A. Jackson is the former editor of Carolina Gardener magazine.

Harvest Time Tips

When are veggies table-ready?

With proper care, spring vegetable plantings will grow up big, strong and productive to add plenty of homegrown edibles to the dinner table. But, while waiting for these crops to mature, now is not too soon to start mentally registering harvest tips to be ready when the bountiful times arrive. Such pointers can also be helpful to folks who don't have gardens but go to pick-your-own farms. In addition, frequenters to farmers' markets will probably find a few of these tips useful to help select produce at their freshest and tastiest.

Bell peppers. The typical bell pepper can be picked when it is either green or red. A red bell pepper is just riper than a green one and tastes slightly sweeter. If you prefer to use a size-o-meter, harvest these peppers when they are about 3 inches in diameter.

Carrots. Carrots are normally ready when their orange crowns poke out above the soil line. For better storage, cut off all but about 2 inches of the fern tops after you pull carrots from the ground.

Cucumbers. Although they come in all sizes, standard cukes will, of course, be a deep green when mature. However, if a cucumber starts to show a yellow tint, it is past ripe.

Eggplant. Common varieties, such as "Black Beauty" and "Classic," should have a shiny, dark purple color and be about 4 inches in diameter. Any eggplant that has been on the plant too long will lose its shine – this also applies to the newer, fancy-colored varieties such as "Neon" and "Ping Tung."

Okra. The better tasting (and least slimy) okra pods are snipped off at about 3 inches long. Chef's Tip: For little or no slime, when boiling okra, leave the pods whole.

Green Beans. These beans are at their best when they are about 3 to 6 inches long. At these sizes, the seeds haven't started to swell yet, and the pods are tender enough to snap easily.

Leaf Lettuce. Wait until the plants are about 5 inches tall and starting to fully fill out with foliage. Then, begin your picking. Use scissors and only take outer leaves so the plants will continue growing strongly in order to extend the harvest season. This method works well for romaine lettuce and spinach, too.

Summer Squash. Tasty crook, straight-neck and zucchini squash will be had when they are picked at about 6 inches long. Round patty pan varieties are in their prime around 4 to 5 inches in diameter.

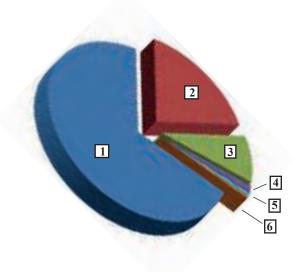

Tomatoes. Come on – everybody knows what a ripe tomato looks like! Sometimes, however, 'maters are picked with a bit of green still showing. To turn the green to red (and make fruits fully ripe) simply place them in a cozy area indoors. A sunny windowsill won't do because the sun's direct rays could redden the skin but not ripen the inside of the tomato. Moderate warmth, not strong light, is the key to properly maturing a tomato.

Operating Statement

Year-Ending December 31	2018	2019

Outdoor Fever

Celebrating South Dakota's Outdoor Spaces

Brenda Kleinjan

editor@sdrea.coop

People are really rediscovering the outdoors again.

South Dakota's state parks and wide-open spaces can be a beacon to those who have spent the winter and spring months cooped up at home.

"Parks are very good places to go outdoors and get out of the house," said Al Nedved, deputy director of parks for the South Dakota Department of Game, Fish and Parks.

Nedved said that in April 2020, the parks had seen an increase in use over 2019, due in part to better weather than the previous year and also to the COVID-19 restrictions.

"People are really rediscovering the outdoors again," said Nedved. "Our parks are open. We are strongly advising people to follow social distancing guidelines set by CDC (Center for Disease Control) and the state department of health."

In addition to the social distancing, the parks are encouraging people to be as self-sufficient as possible by using their own facilities. State park visitors are also asked to plan ahead and use the reservation website to purchase licenses and make reservations ahead of time to limit interaction at the parks as much as possible.

And as Americans head outdoors celebrating June as both National Camping Month and Nation Great Outdoors Month, thousands of South Dakotans will

The state's parks, established in 1919 with the creation of Custer State Park in western South Dakota, saw considerable growth in the post World War II era. The newest park, Good Earth State Park, was established in 2013 southeast of Sioux Falls

"It's a very unique archaeological and historical site," said Nedved, noting the area was a vast trading center for Native Americans going back several hundred years.

The South Dakota State Park system includes 13 state parks, 43 recreation areas, five nature areas, one historic prairie, 69 lakeside use areas and 10 marina/resorts. In addition, the Division of Parks and Recreation manages the

114-mile Mickelson Trail, South Dakota's Snowmobile Trail Program, and maintains 240 public water access areas.

"I always tell people the best-kept secret is the place you have not been yet. You never know where there is a site that will become a favorite spot," said Nedved. "Each park is unique; it's great to experience them all. Each is rich with natural, historical and cultural resources."

Custer State Park is the largest of the parks at 71,000 acres, while Fort Sisseton in northeastern South Dakota is one of the smallest.

and be together.

Pakota is one of the smallest.

They are a great place

to make memories

Palisades State park has geological structures that are really unique," Nedved said.
"The Missouri Piver Parks offer incompa

"The Missouri River Parks offer incomparable opportunities for fishing and water recreation," said Nedved, noting that parks on the river extend from Pollock in the north-central part of the state to the Adams Nature Area and Preserve by North Sioux City which features a well-preserved farmstead and a trail system.

"They are a great place to make memories and be together," Nedved said.

The parks offer a variety of activities: camping and fishing are popular as well as other water-based recreation. Hiking, biking and trail-related activities are a draw as are leisure sport activities like disc golf, volleyball and horseshoes.

"The biggest one is the ability to come out and enjoy the outdoors and have a really good experience," said Nedved. "I like to tell people to think of parks as a really great place for your emotional and physical health. There's no greater place to go and exercise than the great outdoors."

Those intending to camp should do a little

research and have a basic knowledge of the outdoors. In addition to packing bug spray, appropriate clothing and sunscreen, campers in the 2020 season should also plan on

bringing masks and hand sanitizer.

Also on the list should be a NOAA weather radio or other device to track severe weather.

"South Dakota weather can be unpredictable at times. You need to plan ahead and be prepared for wind, hail and lightning," said Nedved.

"We encourage everyone to enjoy the outdoors this summer and do it responsibly," Nedved said.

Before you go, be sure to check the GF&P website at gpf.sd.gov/parks for updates and current information.

UNDERSTANDING PTSD

Jocelyn Romey

jocelyn.romey@sdrea.coop

Trauma is an experience that can occur in an instant – to anyone. It has the power to alter a life or change the future plans or outlook of someone who has suffered it. But does this mean that a traumatic occurrence comes with a life sentence? Does trauma affect people for life?

One unfortunate outcome of trauma is a diagnosed disorder known as post-traumatic stress disorder (PTSD). According to the National Center for PTSD, post-traumatic stress disorder is a mental health problem that some people develop after experiencing or witnessing a life-threatening event, like combat, a natural disaster, a car accident or sexual assault. The normal occurrence of trauma is grief – for a time. During this time, it may be hard to do normal daily activities, like go to work, attend school or spend time with people you care about. But most people start to feel better after a few weeks or months. The National Center for PTSD maintains that if someone who has experienced trauma still has these feelings longer than a few months, then they might have PTSD. For some people, PTSD symptoms may start later on or they may come and go over time.

Dr. Brian Wilson, D.O., a psychiatrist for Fall River Health Services in Hot Springs, S.D., works closely with patients who have experienced trauma and PTSD. The following Q&A points to his knowledge and experience with people dealing with a traumatic aftermath.

■ Do you see signs or symptoms of PTSD often? Is it common? There are specific criteria used to make a

diagnosis of PTSD. Obviously, to be diagnosed with PTSD, an individual must experience exposure to a trauma, but not everyone who experiences a traumatic event will experience PTSD or meet the symptom criteria required for a PTSD diagnosis. PTSD is more common among populations that are more frequently exposed to traumatic events, such as military personnel, first responders, victims of natural disasters and victims of abuse, but PTSD can occur as the result of a wide variety of traumatic events and can occur as the result of exposure to a single traumatic event.

■ Are there different levels of PTSD? Depending on their type of practice, most mental healthcare providers see some individuals with PTSD. This amount varies between different practice settings. In my own practice, I work with a wide age range of patients. A large portion of my own practice is with military veterans and another large portion of my practice is with children who have experienced trauma and abuse. I also work with many adults who have experienced personal traumatic events. Because of this, I work with a large number of patients with PTSD.

A diagnosis of PTSD requires the presence of certain criteria, but the way those symptoms present and the severity of those symptoms can vary among individuals.

■ How can PTSD be managed? There are several treatment options for individuals with PTSD. There are different types of therapy that have shown effectiveness and

there are medications which are often used. Frequently, a combination of one or more of these therapies and medications is used to treat PTSD. With effective treatment, individuals often experience significant improvement and are able to continue living happy and productive lives.

■ As a psychiatrist, what is something you would say to someone struggling with PTSD? It is often difficult for someone with PTSD to recognize that they are experiencing symptoms of PTSD. It frequently presents as a combination of symptoms which may include irritability, anger, restlessness, difficulty sleeping, nightmares and disturbing memories of past events. Symptoms may also include sadness, crying, nervousness, worry, fear, emotional disturbance and mood fluctuations.

In children and adolescents, PTSD often presents as behavioral problems. These symptoms often have a negative effect on personal relationships, friendships, work and professional relationships and an individual's life satisfaction and happiness. Individuals with PTSD often attempt to self-treat with alcohol, drugs, unsafe and unhealthy life choices, and other dangerous and/or harmful behaviors without even realizing that is what they are doing. This is ineffective and even harmful and often leads to even more problems for those individuals.

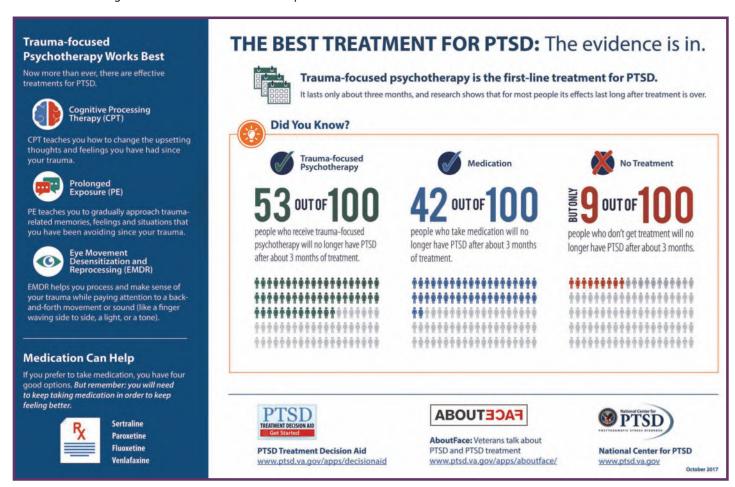

What is something that you would want people to know about PTSD? Often people have misperceptions about mental health treatment and what it is. In the past, there was often a stigma attached to mental health problems

and they were often, incorrectly, seen as a character flaw or sign of weakness. There was an idea that asking for help meant that a person wasn't strong and there was something wrong with them. It was often something that "our family didn't talk about." As we understand more about the role of genetics, neuroanatomy and neurochemistry in mental health, we realize that the idea of a negative stigma related to mental health is inaccurate, outdated and

We now know that PTSD is related to a combination of environmental and biological factors and that seeking help for PTSD is a sign of strength and the first step to a better quality of life and healing.

wrong. We now know that PTSD is related to a combination of environmental and biological factors and that seeking help for PTSD is a sign of strength and the first step to a better quality of life and healing.

National PTSD Awareness Month is observed annually in June. This time is dedicated to raise awareness about post-traumatic stress disorder. June 27 is also National PTSD Awareness Day. For more information about PTSD, visit www.ptsd.va.gov.

Note: Please make sure to call ahead to verify the event is still being held.
